Person—maximum stenosis posterior descending coronary artery, percentage N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Maximum stenosis posterior descending artery
METEOR identifier:	347154
Registration status:	Health, Recorded 21/05/2007
Definition:	The percentage of stenosis at its maximal point in a person's posterior descending coronary artery.
Data Element Concept:	Person—maximum stenosis posterior descending coronary artery
Value Domain:	Percentage N[NN]

Value domain attributes

Representational attributes

Representation class:	Percentage	
Data type:	Number	
Format:	N[NN]	
Maximum character length:	3	
	Value	**Meaning**
Supplementary values:	999	Not stated/inadequately described

Data element attributes

Collection and usage attributes

Guide for use:

Stenosis represents the percentage of occlusion, from 0 to 100%, associated with the identified vessel system. Percent stenosis at its maximal point is estimated to be the amount of reduction in the diameter of the “normal” vessel proximal and distal to the lesion.

In instances where multiple lesions are present, collect the highest percentage stenosis noted.

Collection methods:

This data is derived from visual reporting by the physician reporting the angiogram.

When reporting stenosis in coronary arteries, reporting of all the following coronary vessels is mandatory.

- Diagonal coronary artery
- Left anterior descending coronary artery
- Inferior surface artery
- Left circumflex coronary artery
- Left main coronary artery
- Posterior descending artery
- Right coronary artery
