

Functional stress test—ischaemic and perfusion outcome result

Metadata item type: Data Element Concept

METEOR identifier: 349700

Registration status:

- [Health](#), Standard 01/10/2008

Definition: Indicates the result of the person's functional stress test in terms of ischaemic and perfusion outcome.

Object Class attributes

Identifying and definitional attributes

Object class: [Functional stress test](#)

Definition: A test performed to evaluate arterial blood flow to the myocardium (heart muscle) during physical exercise, compared to blood flow while at rest.

Specialisation of: [Service/care event](#)

Property attributes

Identifying and definitional attributes

Property: [Ischaemic and perfusion outcome result](#)

Definition: Imbalances of relative blood flow to the left ventricular muscle tissue reflected through the ischaemic and perfusion outcomes of a functional stress test.

Property group: [Assessment event](#)
