Ventricular ejection fraction cluster

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	351881
Registration status:	Health, Standard 01/10/2008
DSS type:	Data Element Cluster
Scope:	The ventricular ejection fraction is the fraction of blood pumped out of a ventricle with each heart beat. Impaired ventricular ejection fraction can be indicative of damage to the heart muscle, such as that sustained during myocardial infarction. The ventricular ejection fraction cluster collects information on the timing, measurement type and results of a ventricular ejection fraction measurement during the current hospital presentation.
