# Person—tobacco smoking start age, total years N[NN]

## Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Tobacco smoking start age
METEOR identifier:	376322
Registration status:	<a href="#">Health</a> , Standard 19/11/2015
Definition:	The age in years at which a person first smoked a full cigarette.
Context:	Public health and health care

## Data element concept attributes

### Identifying and definitional attributes

Data element concept:	<a href="#">Person—tobacco smoking start age</a>
METEOR identifier:	269762
Registration status:	<a href="#">Health</a> , Standard 01/03/2005
Definition:	The age at which a person first started to smoke.
Object class:	<a href="#">Person</a>
Property:	<a href="#">Tobacco smoking start age</a>

## Value domain attributes

### Identifying and definitional attributes

Value domain:	<a href="#">Total years N[NN]</a>
METEOR identifier:	290412
Registration status:	<a href="#">Children and Families</a> , Standard 22/11/2016 <a href="#">Community Services (retired)</a> , Standard 04/05/2005 <a href="#">Disability</a> , Standard 13/08/2015 <a href="#">Early Childhood</a> , Standard 21/05/2010 <a href="#">Health</a> , Standard 04/05/2005 <a href="#">Housing assistance</a> , Standard 29/08/2005 <a href="#">Indigenous</a> , Standard 13/03/2015 <a href="#">National Health Performance Authority (retired)</a> , Retired 01/07/2016 <a href="#">WA Health</a> , Standard 06/03/2014
Definition:	Total number of completed years.

## Representational attributes

<b>Representation class:</b>	Total	
<b>Data type:</b>	Number	
<b>Format:</b>	N[NN]	
<b>Maximum character length:</b>	3	
	<b>Value</b>	<b>Meaning</b>
<b>Supplementary values:</b>	999	Unknown/not stated

Unit of measure: Year

## Data element attributes

### Collection and usage attributes

<b>Guide for use:</b>	Record age in completed years.
<b>Collection methods:</b>	The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 7) and self-administered (Question 4) versions. The questions cover persons aged 18 years and over.
<b>Comments:</b>	<p>Start-age may be used to derive duration of smoking, which is a much stronger predictor of the risks associated with smoking than is the total amount of tobacco smoked over time.</p> <p>Where the information is collected by survey and the sample permits, population estimates should be presented by sex and age groups. The recommended age groups are: &lt;10, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20-24, 25-29 and 30. Summary statistics may need to be adjusted for age and other relevant variables.</p> <p>It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.</p>
