Service provider organisation—number of escapes, total N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Number of escapes
Synonymous names:	Escapes from secure perimeter; Escapes from legal custody.
METEOR identifier:	387491
Registration status:	Community Services (retired) , Standard 14/09/2009 [Non Dictionary]
Definition:	The total number of successful incidences of escape from the agency or organisation.
Data Element Concept:	Service provider organisation—number of escapes
Value Domain:	Total escapes N[NN]

Value domain attributes

Representational attributes

Representation class:	Total
Data type:	Number
Format:	N[NN]
Maximum character length:	3
Proposed unit of measure:	Escapes

Data element attributes

Collection and usage attributes

Guide for use:	This data standard is used to count both the number of successful escapes from within a secure perimeter of a remand/detention centre by clients who are under the supervision of the centre, and the number of successful escapes from legal custody (other than from within the secure perimeter of a remand/detention centre) by clients who are under direct, physical supervision of the centre. Note: escapes whilst on escorted leave should be included.
Collection methods:	This data standard should count the total number of successful escapes in a set 12 month reporting period. This is a count of the number of episodes of an individual involved in an incident of escape. For example, if three people escape in one incident, this will be counted as three episodes. In addition, if an individual escapes multiple times, they should be counted for each escape.
