

Social and community factors

Measures the prevalence of social and community factors, such as social support, life stress, or social capital that epidemiological studies have shown to be related to health.

Examples include school readiness, social support, housing affordability and literacy.

Indicators in this framework

- [National Disability Agreement: b\(1\)-Proportion of people with disability who participate in social and community activities, 2012 Community Services \(retired\)](#), Superseded 23/05/2013
- [National Disability Agreement: b\(2\)-Proportion of people with disability who participate in social and community activities, 2012 Community Services \(retired\)](#), Superseded 23/05/2013
- [National Disability Agreement: b\(3\)-Proportion of people with disability who participate in social and community activities, 2012 Community Services \(retired\)](#), Superseded 23/05/2013
