# Age of labour force exit

## Identifying and definitional attributes

**Item type:** Framework Dimension

**METEOR identifier:** 392675

**Description:** Retirement is associated with cessation of work and receipt of a pension. Actual retirement ages are difficult to measure directly without internationally comparable longitudinal data, so international comparisons must rely on indirect measures from cross-sectional data. Indirect measures regard persons above a specified age as "retired" if they are not in the labour force at the time of a survey.
