Age of labour force exit

Identifying and definitional attributes

Item type: Framework Dimension

METEOR identifier: 392675

Description: Retirement is associated with cessation of work and receipt of a pension. Actual

retirement ages are difficult to measure directly without internationally comparable longitudinal data, so international comparisons must rely on indirect measures from cross-sectional data. Indirect measures regard persons above a specified age as

"retired" if they are not in the labour force at the time of a survey.
