National Healthcare Agreement: P02-Incidence of sexually transmitted infections and blood-borne viruses, 2010

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: Incidence of sexually transmitted infections and blood-borne viruses, 2010

METEOR identifier: 393139

Registration status: Health, Superseded 08/06/2011

Description: The incidence of sexually transmitted infections and blood-borne viruses.

Indicator set: National Healthcare Agreement (2010)

Health, Superseded 08/06/2011

Outcome area: Prevention

Health, Standard 07/07/2010

Data quality statement: National Healthcare Agreement: P02-Incidence of sexually transmitted infections

and blood-borne viruses, 2010 QS Health, Superseded 08/06/2011

Collection and usage attributes

Computation description: Syphilis limited to cases of less than 2 years duration, and cases of congenital

syphilis.

HIV data includes reports of newly diagnosed HIV infection and cases of HIV

infections known to have been newly acquired.

Includes all Hepatitis B and C infections, whether or not the infection was sexually

transmitted.

Rates are directly age-standardised to the Australian population as at 30 June

2001.

Computation: 100,000 × (Numerator ÷ Denominator)

Presented as a rate per 100,000.

Age-standardised to the Australian population as at 30 June 2001, using 5-year age groups to 84 years. Indigenous population data are not available for all states

and territories for 5-year age groups beyond 64 years, so Indigenous

disaggregations are standardised to 64 years.

Calculated separately for each type of infection.

Numerator: Number of notifications of new cases of syphilis, HIV, Hepatitis B, Hepatitis C,

Chlamydia and gonococcal infection

Numerator data elements:

Data Element / Data Set-

Notifications of new cases of selected sexually transmitted disease and/or blood-borne viruses

Data Source

National Notifiable Diseases Surveillance System (NNDSS)

Guide for use

Data source type: Administrative by-product data

Comments:

Specified disaggregation: Nationally and by state/territory: by age group, sex,

Indigenous status, remoteness area and SEIFA of residence.

Available disaggregation: Nationally and by state/territory: by age group, sex,

Indigenous status, remoteness area and SEIFA of residence.

Data for 2008-09 will be available at the end of 2009.

Most recent data available for 2010 CRC baseline report: 2008.

For data by Indigenous status: ABS Indigenous Experimental Estimates and

Projections (Indigenous Population) Series B as at 30 June 2008.

For data by socioeconomic status: calculated using the ABS' Index of Relative Socioeconomic Disadvantage and Estimated Resident Population (ERP) by Statistical Local Area (SLA) as at 30 June 2008. Each SLA in Australia is ranked and divided into quintiles in a population-based manner, such that each quintile has approximately 20% of the population.

For data by remoteness: ABS ERP as at 30 June 2008, by remoteness areas, as specified in the Australian Standard Geographical Classification (ASGC).

Accountability attributes

Reporting requirements: National Healthcare Agreement Organisation responsible

for providing data:

Department of Health and Ageing

Further data development / collection required:

Specification: Long-term

Improvement in the quality of Indigenous identification in notification data in the

National Notifiable Diseases Surveillance System (NNDSS).

Other issues caveats: Disaggregation by Indigenous status, remoteness area and SEIFA of

residence within individual states/territories is subject to data quality

considerations.

Some disaggregations could result in numbers too small for publication.

The capacity remains to add additional sexually transmitted infections and blood-

borne viruses as public health priorities change.
