Cancer treatment—immunotherapy start date, DDMMYYYY

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Immunotherapy start date
METEOR identifier:	393541
Registration status:	Health , Superseded 08/05/2014
Definition:	The start date of immunotherapy administered during the initial course of treatment for cancer, expressed as DDMMYYYY.
Data Element Concept:	Cancer treatment—immunotherapy start date
Value Domain:	Date DDMMYYYY

Value domain attributes

Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	DDMMYYYY
Maximum character length:	8

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use:	<p>Record the first or earliest date on which immunotherapy was administered during the initial course of treatment. The initial course of treatment includes all treatments administered to the patient from diagnosis and before disease progression or recurrence.</p> <p>The start date of immunotherapy treatment is recorded regardless of whether the course of treatment is completed as intended, and regardless of the intent or timing of the immunotherapy.</p> <p>A patient may undergo immunotherapy for an extended period of time.</p> <p>The start date of the immunotherapy treatment is recorded even if the agent is experimental.</p> <p>Multiple entries are not permitted.</p> <p>Dates of surgery, radiotherapy and other systemic treatments are collected as separate items. However, if a patient receives treatment with a protocol that includes different types of systemic therapy agents, for example, a chemotherapy agent and an immunotherapy agent, record the completion date of treatment in both relevant data items.</p>
Collection methods:	The information should be obtained from the patient's medical record.

Comments: Collecting the start and finish dates for treatment modalities will enable an estimate of treatment duration.
