## Collection and usage attributes

<b>Guide for use:</b>	For the ambulatory service setting, the service unit is equivalent to an organisation's ambulatory services as a whole. However, ambulatory service units should be differentiated by target population. Where an organisation provides multiple teams serving the same target population, these may be grouped and reported as a single service unit, or identified as individual service units in their own right. Ambulatory services would be separately identifiable as service units using the <a href="#">Specialised mental health service—target population group, code N</a> data element. For additional information, please refer to the glossary item <a href="#">Ambulatory mental health care service</a> . The complete identifier string, including State/Territory identifier, Region identifier, Organisation identifier, Service unit cluster identifier and Ambulatory service unit identifier, should be a unique code for the service unit in that state/territory. Service unit reporting structures should be identical between all mental health collections (e.g., Mental Health National Minimum Data Sets and the Mental Health National Outcomes and Casemix Collection (NOCC)).
