Establishment—region name, text XXX[X(57)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Region name
METEOR identifier:	407187
Registration status:	Health , Standard 07/12/2011 Independent Hospital Pricing Authority , Qualified 23/11/2015
Definition:	The appellation by which an administrative region is known or called, as represented by text.
Data Element Concept:	Establishment—region name
Value Domain:	Text XXX[X(57)]

Value domain attributes

Representational attributes

Representation class:	Text
Data type:	String
Format:	XXX[X(57)]
Maximum character length:	60

Data element attributes

Collection and usage attributes

Guide for use:	The names of regions are determined by the relevant state or territory. The region refers to an administrative concept, not a geographical one, because the intent is to capture expenditure and other related data. States and territories may have one or more regions into which the state or territory is divided and to which its service organisations belong. In those cases, region should be reported using the Region identifier data element. In the smaller states or territories there may only be one or no region. In these cases, the region name would repeat the name of the state or territory.
