Person with cancer—histopathological grade, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Histopathological grade
METEOR identifier:	422555
Registration status:	Health , Standard 07/12/2011
Definition:	The histopathological grade or differentiation in a person with cancer, as represented by a code.
Data Element Concept:	Person with cancer—histopathological grade
Value Domain:	Histopathological grade code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	Meaning
Permissible values:	1	Grade 1: Low grade; well differentiated, differentiated, NOS
	2	Grade 2: Intermediate grade, moderately differentiated, moderately well differentiated, intermediate differentiation
	3	Grade 3: High grade, poorly differentiated
	4	Grade 4: Undifferentiated, anaplastic
Supplementary values:	9	Grade or differentiation not determined, not stated or not applicable

Data element attributes

Collection and usage attributes

Guide for use: Histopathological grade or differentiation describes how little the tumour resembles the normal tissue from which it arose.

Only malignant tumours are graded and only one code can be recorded.

When more than one grade is documented for the primary tumour within the same specimen report, use the highest grade. For example, if grade 2-3 is documented, record the grade as 3.

If the grades differ on multiple pathology reports for the same tumour, use the value from the larger specimen (for example, the grade from a surgical excision specimen would be used over the grade from a specimen from a diagnostic biopsy).

Breast cancer coding rules:

Use the Nottingham grade (Elston-Ellis modification of Bloom-Richardson grading system). This classification only uses grades 1-3, 9.

For an invasive tumour with an in situ component, record the grade for the invasive component only. If the grade of the invasive component is not reported, record the grade as unknown.

Collection methods: Cancer registry use:

Collection of this data item should only be from notification and pathology reports relating to initial diagnosis and not for recurrent or metastatic disease.

Only malignant tumours are graded.
