Collection and usage attributes

Guide for use: The Australian Standard Geographical Classification (ASGC) is a hierarchical classification system of geographical areas and consists of a number of interrelated structures. It provides a common framework of statistical geography and enables the production of statistics which are comparable.

The product ASGC contains four comma delimited files showing the levels and hierarchy of those ASGC structures current for the edition: the Local Government Area (LGA) Structure, the Main Structure, the Statistical District (SD) Structure and the Statistical Region (SR) Structure.

The LGA Structure covers only incorporated areas of Australia. The major areas of Australia not administered by incorporated bodies are the northern parts of South Australia, most of the Northern Territory and all of the Australian Capital Territory and the Other Territories.

Collection methods: In Population Census years the LGA Structure has four levels of hierarchy. In ascending order these are: CDs-SLAs-LGAs-S/Ts (Incorporated areas). Codes are unique only within a state/territory. For unique Australia-wide LGA code identification, the four digit code must be preceded by the state/territory code. All LGA codes end with the digit 0.
