DSS type: Data Set Specification (DSS)

Scope: The person details data dictionary contains the data elements to identify the name and demographic characteristics of a person defined as a human being, whether man, woman or child. It is based on the Standards prepared by Standards Australia Subcommittee IT-027-01, Personal and Corporate Data-Representation and Management, for Committee IT-027, Data Management and Interchange to supersede AS 4590-1999.

The revised AS 4590—2006 Interchange of client information standard is a result of industry concern at the numerous data interchange formats used within the information technology industry. The objective of the Standard is to provide industry with a common client data interchange standard.

Wherever possible, the definitions of data elements are based on existing standards.

Reference has been made to International and Australian Standards, and to standards from the Australian Bureau of Statistics.

Collection and usage attributes

Guide for use: The Person details data dictionary is one of a suite of data dictionaries based on the AS 4590—2006 Interchange of client information standard. This suite of data dictionaries is not limited to a specific data collection. The aim is to enable data developers to select appropriate data elements to use in meeting the needs of their specific data collection. These data dictionaries are:

- Party identifier details data dictionary
- Electronic contact details data dictionary
- Organisation details data dictionary
- Address details data dictionary

A table has been created to show the mapping between the data elements within the Person details data dictionary and the AS 4590—2006 Interchange of client information standard. See: [Person details mapping](#)
