Referral to psychosocial services indicator

Identifying and definitional attributes

Metadata item type: Property

METEOR identifier: 431244

Registration status: [Health](#), Standard 08/05/2014

Definition: An indicator of whether a patient has been referred to psychosocial services.

The psychosocial needs of patients vary with their circumstances; however, most patients will experience some degree of practical, psychological and emotional challenges as a result of their diagnosis and treatment-related adverse effects.

For instance, patients undergoing treatment may experience fear, anxiety and depression, while managing the demands of work and family with the demands of treatment may create enormous stress.

Providers of psychosocial services support patients and develop strategies to identify and minimise the social and psychological impact of their health condition.
