Data Element Concept:	Person with cancer—referral to palliative care services indicator
Value Domain:	Yes/no/unknown code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	Meaning
Permissible values:	1	Yes
	2	No
Supplementary values:	8	Unknown

Data element attributes

Collection and usage attributes

Guide for use:	Record whether the patient was referred to palliative care services. Referral to palliative care services is referral to palliative care administered by palliative care specialists such as a palliative care team or palliative physician. The point of transition to palliative care is when treatment goals become focussed on improving quality of life. However, the transition does not imply a discontinuation of active care or abandonment from treating cancer team.
Collection methods:	This information should be sought from the patient's medical record.
Comments:	This information is used to evaluate the quality of care for patients with cancer, and may have implications for access to, and the provision of, cancer services.
