# Residual (R) tumour type code AX

## Identifying and definitional attributes

|                             |  |
|-----------------------------|--|
| <b>Metadata item type:</b>  | Value Domain   |
| <b>METEOR identifier:</b>   | 433802   |
| <b>Registration status:</b> | <a href="#">Health</a> , Standard 08/05/2014                         |
| <b>Definition:</b>          | A code set representing the type of residual tumour after treatment. |

## Representational attributes

|                                  |        |
|----------------------------------|--------|
| <b>Representation class:</b>     | Code   |
| <b>Data type:</b>                | String |
| <b>Format:</b>                   | AX     |
| <b>Maximum character length:</b> | 2      |

|                              | <b>Value</b> | <b>Meaning</b>                                 |
|------------------------------|--------------|--|
| <b>Permissible values:</b>   | R0           | No residual tumour                             |
|                              | R1           | Microscopic residual tumour                    |
|                              | R2           | Macroscopic residual tumour                    |
|                              | RX           | Presence of residual tumour cannot be assessed |
| <b>Supplementary values:</b> | R7           | Not applicable-surgery was not performed       |

## Collection and usage attributes

|                       |   |
|-----------------------|---|
| <b>Guide for use:</b> | Record the presence or absence of residual tumour after treatment.<br><br>Residual disease is based on the UICC TNM cancer staging system descriptor represented by the symbol R. |
|-----------------------|---|

## Source and reference attributes

|                                 |  |
