## Indigenous primary health care: PI09b-Proportion of regular clients whose smoking status has been recorded, 2012

## Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI09b-Proportion of regular clients whose smoking status has been recorded, 2012
METEOR identifier:	435799
Registration status:	Health, Superseded 23/02/2012
Description:	NOTE: THIS PERFORMANCE INDICATOR HAS BEEN SUPERSEDED BY ITS EQUIVALENT FOR 2013, WITHOUT BEING MADE A STANDARD.
	Proportion of regular clients who are Indigenous, aged 15 years and over and whose smoking status has been recorded at the primary health care service.
Rationale:	Smoking has been identified as one of the key risk factors contributing to the burden of disease for Indigenous Australians. It is important that Indigenous primary health care services know the smoking status of clients in order to provide appropriate medical care.
Indicator set:	Indigenous primary health care key performance indicators (2012) Health, Superseded 23/02/2012

## Collection and usage attributes

Population group age from:	15 years
Computation description:	Proportion of regular clients who are Indigenous, aged 15 years and over and whose smoking status has been recorded at the primary health care service.
	'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2 years.
	Results arising from measurements conducted outside of the service, that are known by the service, are included in the calculation of this indicator.
	Presented as a percentage.
Computation:	(Numerator ÷ Denominator) x 100
Numerator:	Number of regular clients who are Indigenous, aged 15 years and over and whose smoking status has been recorded at the primary health care service.
