National Healthcare Agreement: PI 56-People aged 65 years or over receiving sub-acute services, 2012

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: PI 56-People aged 65 years or over receiving sub-acute services, 2012

METEOR identifier: 435895

Registration status: Health, Retired 25/06/2013

Description: Number and rate of admitted sub-acute services to people 65 years or over

Indicator set: National Healthcare Agreement (2012)

Health, Superseded 25/06/2013

Outcome area: Aged Care

Health, Standard 07/07/2010

Data quality statement: National Healthcare Agreement: PI 56-People aged 65 years or over receiving

sub-acute services, 2012 QS Health, Retired 14/01/2015

Collection and usage attributes

Population group age

from:

Persons from 65 years

Computation description: Sub-acute care includes separations with a care type of rehabilitation, palliative

care, geriatric evaluation and management, and psychogeriatric care.

Rates directly age-standardised to the 2001 Australian population for disaggregation by remoteness and SEIFA Index of Relative Socioeconomic

Disadvantage (IRSD) only.

Analysis by state and territory is based on location of service.

Analysis by remoteness and SEIFA IRSD is based on usual residence of person.

Presented as:

a number, andper 1,000 population.

Computation: Number

1,000 × (Numerator ÷ Denominator)

Numerator: Number of sub-acute care separations for people aged 65 years or over

Numerator data elements:

Data Element / Data Set

Episode of admitted patient care—admission date, DDMMYYYY

Data Element / Data Set

Person—age, total years N[NN]

Data Source

ABS Indigenous experimental estimates and projections (2001 Censusbased)

Guide for use

Data source type: Census-based data plus administrative by-product data

Disaggregation:

2009–10—Nationally, by SEIFA Index of Relative Socioeconomic Disadvantage (IRSD) deciles

2007–08 (resupplied for revised Indigenous and SEIFA analysis), and 2009–10—State and territory, by:

- age group (65-69, 70-74, 75-79, 80-84, 85 years and over)
- Indigenous status
- remoteness (Australian Standard Geographical Classification Remoteness Structure)
- SEIFA IRSD quintiles

Some disaggregation may result in numbers too small for publication. National disaggregation by Indigenous status will be based on data only from jurisdictions for which the quality of Indigenous identification is considered acceptable.

Disaggregation data

-Data Element / Data Set-

elements:

Establishment—Australian state/territory identifier, code N

NMDS / DSS

Admitted patient care NMDS 2009-10

Guide for use

Data source type: Administrative by-product data

Data Element / Data Set

Person—area of usual residence, geographical location code (ASGC 2008) NNNNN

Data Source

National Hospital Morbidity Database (NHMD)

NMDS / DSS

Admitted patient care NMDS 2009-10

Guide for use

Data source type: Administrative by-product data Used for disaggregation by remoteness and SEIFA IRSD

Comments: Most recent data available for 2012 CRC report: 2009–10.

The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.
