

Indigenous primary health care: PI14b- Proportion of regular clients aged 50 years and over who are immunised against influenza, 2013

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI14b-Proportion of regular clients aged 50 years or more who are immunised against influenza, 2013
METEOR identifier:	441433
Registration status:	<ul style="list-style-type: none">• Health, Superseded 21/11/2013• Indigenous, Superseded 21/11/2013
Description:	Proportion of regular clients who are Indigenous, aged 50 years and over and who are immunised against influenza.
Rationale:	Influenza remains a major cause of illness and death among Indigenous adults. Vaccination has been demonstrated to reduce deaths.
Indicator set:	Indigenous primary health care key performance indicators (2013) Health , Superseded 21/11/2013 Indigenous , Superseded 21/11/2013

Collection and usage attributes

Population group age from:	50 years
-----------------------------------	----------

Computation description: Proportion of regular clients who are Indigenous, aged 50 years and over and who are immunised against influenza.

'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2 years.

For Indigenous people aged 50 years and over, the *Australian Immunisation Handbook* (DoHA 2008) recommends immunisation against influenza. An Indigenous person aged 50 years and over is immunised against influenza if they have received an influenza vaccine in the previous year.

Presented as a percentage.

Computation: $(\text{Numerator} \div \text{Denominator}) \times 100$

Numerator: Number of regular clients who are Indigenous, aged 50 years and over and who are immunised against influenza.
