# Indigenous primary health care: PI14b-Proportion of regular clients aged 50 years and over who are immunised against influenza, 2013

# Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

**Short name:** Pl14b-Proportion of regular clients aged 50 years or more who are immunised

against influenza, 2013

METEOR identifier: 441433

**Registration status:** <u>Health,</u> Superseded 21/11/2013

Indigenous, Superseded 21/11/2013

**Description:** Proportion of regular clients who are Indigenous, aged 50 years and over and who

are immunised against influenza.

Rationale: Influenza remains a major cause of illness and death among Indigenous adults.

Vaccination has been demonstrated to reduce deaths.

Indicator set: Indigenous primary health care key performance indicators (2013)

Health, Superseded 21/11/2013 Indigenous, Superseded 21/11/2013

# Collection and usage attributes

Population group age

from:

50 years

Computation description:

Proportion of regular clients who are Indigenous, aged 50 years and over and who

are immunised against influenza.

'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key

performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2

years.

For Indigenous people aged 50 years and over, the *Australian Immunisation Handbook* (DoHA 2008) recommends immunisation against influenza. An Indigenous person aged 50 years and over is immunised against influenza if they

have received an influenza vaccine in the previous year.

Presented as a percentage.

**Computation:** (Numerator ÷ Denominator) x 100

Numerator: Number of regular clients who are Indigenous, aged 50 years and over and who are

immunised against influenza.
