Identifying and definitional attributes

Metadata item type: Property
METEOR identifier: 449118

Registration status: Independent Hospital Pricing Authority, Standard 11/10/2012

Definition: A resource utilisation classification based on patient functioning, diagnosed

conditions, demographic characteristics of the patient and usage of hospital

resources.

Context: The development of the Australian National Sub-acute and Non-acute Patient

classification (AN-SNAP) has created a descriptive framework for studying subacute care hospitalisation. AN-SNAP provides a summary of the type and complexity of sub-acute patients a hospital treats. As a framework for describing the products of a hospital (that is, patients receiving services), AN-SNAP allows meaningful comparison of hospitals' efficiency and effectiveness under alternative

systems of health care provision.
