Definition: The Standard Australian Classification of Countries (SACC 2011) code set

representing a country.

Representational attributes

Classification scheme: Standard Australian Classification of Countries 2011

Representation class: Code

Data type: Number

Format: NNNN

Maximum character length: 4

Collection and usage attributes

Guide for use: The Standard Australian Classification of Countries 2011 (SACC) is a four-digit,

three-level hierarchical structure specifying major group, minor group and country.

A country, even if it comprises other discrete political entities such as states, is treated as a single unit for all data domain purposes. Parts of a political entity are not included in different groups. Thus, Hawaii is included in Northern America (as

part of the identified country United States of America), despite being

geographically close to and having similar social and cultural characteristics as the

units classified to Polynesia.
