Definition:	A combination of alphanumeric characters.

Representational attributes

Representation class: Text
Data type: String
Format: X[X(99)]
Maximum character length: 100

Data element attributes

Collection and usage attributes

Guide for use: If a comorbidity is present at the time of diagnosis of cancer that is not specified in [Person with cancer—comorbidities, code N\[N\]](#), record the comorbidity in text.

The term comorbidities is generally used with cancer patients to refer to conditions not related to the cancer, and in epidemiology to indicate the coexistence of two or more disease processes.

The presence of comorbidities in a patient may affect treatment decisions and be an important prognostic determinant. For example, they may be used to adjust outcome statistics when evaluating patient survival and other outcomes.

Collection methods: Collect from patient medical records.
