

Cancer treatment—variation from planned treatment indicator

Metadata item type: Data Element Concept

METEOR identifier: 468360

Registration status:

- [Health](#), Standard 04/02/2015

Definition: An indicator of whether the course of treatment for cancer received varied from the initial treatment plan.

This includes the cessation of treatment and variation of the treatment type, delivery and/or dose.

Object Class attributes

Identifying and definitional attributes

Object class: [Cancer treatment](#)

Definition: The course of cancer-directed treatment or treatments, with defined dates of commencement and cessation, given to the patient by a treatment provider or team of providers.

This may include cancer-directed surgical treatment, radiation therapy and systemic agent therapy for cancer. It applies to the primary course of cancer treatment, treatment administered to the patient in response to disease progression or treatment administered to the patient in response to disease recurrence.
