Person with cancer—late effect indicator, yes/no/unknown/not stated/inadequately described code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Late effect indicator
METEOR identifier:	469620
Registration status:	Health , Standard 04/02/2015
Definition:	An indicator of whether the person with cancer is experiencing any late effects relating to the cancer and/or cancer treatment, as represented by a code.
Data Element Concept:	Person with cancer—late effect indicator
Value Domain:	Yes/no/unknown/not stated/inadequately described code N

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Yes
	2	No
Supplementary values:	8	Unknown
	9	Not stated/inadequately described

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use: Indicate whether the person with cancer has experienced any [late effects](#) related to cancer and/or cancer treatment.

This does not include issues relating to the recurrence of cancer or progression of the disease. Late effects are as a result of the treatment, the disease process, or both. Examples of late effects relating to cancer are infertility, hyperthyroidism, scoliosis, cognitive impairment and congestive heart failure.
