# Person with cancer—date of late effect, DDMMYYYY

## Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Date of late effect
METEOR identifier:	469791
Registration status:	<a href="#">Health</a> , Standard 04/02/2015
Definition:	The date on which a <a href="#">late effect</a> related to cancer and/or cancer treatment is identified in a person with cancer, expressed as DDMMYYYY.
Data Element Concept:	<a href="#">Person with cancer—date of late effect</a>
Value Domain:	<a href="#">Date DDMMYYYY</a>

## Value domain attributes

## Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	DDMMYYYY
Maximum character length:	8

## Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
--------------------------	--

## Data element attributes

## Collection and usage attributes

Guide for use:	<p>Record the earliest date that a <a href="#">late effect</a> related to cancer and/or cancer treatment is identified. This may be the first date that it is recognised by a person with cancer or the first date that the late effect is confirmed by a medical practitioner (general practitioner or specialist), whichever is earliest. This should be recorded for each late effect experienced by the person with cancer.</p> <p>This does not include issues relating to the recurrence of cancer or progression of the disease. Late effects are as a result of the treatment, the disease process, or both. Examples of late effects relating to cancer are infertility, hyperthyroidism, scoliosis, cognitive impairment and congestive heart failure.</p>
Collection methods:	Collect this from patient medical records.

## Source and reference attributes

Submitting organisation:	Cancer Australia
Reference documents:	Meadows AT (2003). Pediatric Cancer Survivors: Past History and Future Challenges. <i>Current Problems in Cancer</i> , 27(3), 177.
