Non-admitted patient emergency department care

DSS 1 January 2012-30 June 2012

Identifying and definitional attributes

Metadata item type: Data Set Specification

METEOR identifier: 471595

Registration status: [Health](#), Retired 30/01/2012

DSS type: Data Set Specification (DSS)

Scope: The scope of the Non-admitted patient emergency department care data set specification (NAPEDC DSS) is non-admitted patients registered for care in emergency departments in selected public hospitals that are classified as either Peer Group A or B in the Australian Institute of Health and Welfare's Australian Hospital Statistics publication from the preceding financial year. (See also Scope links with other metadata sets in the Comments section below.)

Patients who were dead on arrival are in scope if an emergency department clinician certified the death of the patient.

Patients who leave the emergency department after being triaged and then advised of alternative treatment options are in scope.

The scope includes only physical presentations to emergency departments. Advice provided by telephone or videoconferencing is not in scope, although it is recognised that advice received by telehealth may form part of the care provided to patients physically receiving care in the emergency department.

The care provided to patients in emergency departments is, in most instances, recognised as being provided to 'non-admitted' patients. Patients being treated in emergency departments may subsequently become 'admitted' (including admission to a short stay unit, admission to elsewhere in the emergency department, admission to another hospital ward, or admission to hospital-in-the-home). All patients remain in scope for this collection until they are recorded as having physically departed the emergency department, regardless of whether they have been admitted. For this reason there is an overlap in scope of this DSS and the Admitted patient care national minimum data set (APC NMDS).

Collection and usage attributes

Statistical unit: Emergency department stay.

Guide for use: The definition of a Short Stay Unit is as per clause C48 of the National Health Reform Agreement—National Partnership Agreement on Improving Public Hospital Services (NPA IPHS), as follows:

a) Designated and designed for the short term treatment, observation, assessment and reassessment of patients initially triaged and assessed in the emergency department (ED);

b) Have specific admission and discharge criteria and policies;

c) Designed for short term stays no longer than 24 hours;

d) Physically separated from the ED acute assessment area;

e) Have a static number of beds with oxygen, suction, patient ablution facilities; and

f) Not a temporary ED overflow area nor used to keep patients solely awaiting an inpatient bed nor awaiting treatment in the ED.

Collection methods:**National reporting arrangements**

For the reference year 2011-12, data provided to the National non-admitted patient emergency department care database (NNAPEDCD) will be in accordance with the [Non-admitted patient emergency department care national minimum data set \(NMDS\) 2011-2012](#), for data collected from 1 July 2011 to 31 December 2011, and in accordance with the [Non-admitted patient emergency department care data set specification \(DSS\) 1 January 2012-30 June 2012](#), for data collected from 1 January 2012 to 30 June 2012.

State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on a quarterly basis within one month of the end of a reporting period and an annual basis within three months of the reporting period.

The Institute and the Commonwealth Department of Health and Ageing will agree on a data quality and timeliness protocol. Once cleaned, a copy of the data and a record of the changes made will be forwarded by the Institute to the Commonwealth Department of Health and Ageing. A copy of the cleaned data for each jurisdiction should also be returned to that jurisdiction on request.

Periods for which data are collected and nationally collated

Quarterly; end of March and June. Extraction of data for each quarter should be based on the date of the end of the emergency department stay. For example, a presentation that commences at 11pm on 30 June and ends at 2am 1 July is not in scope for the April to June quarter.

Implementation start date: 01/01/2012

Implementation end date: 30/06/2012

Comments:**Scope links with other metadata sets**

Episodes of care for admitted patients are reported through the Admitted patient care NMDS.

National Health Reform Agreement—National Partnership Agreement on Improving Public Hospital Services

The scope for reporting against the National Emergency Access Target is all hospitals reporting to the Non-admitted patient emergency department care national minimum data set (NAPEDC NMDS) (Peer groups A, B and other) as at August 2011 (when the Agreement was signed). For the duration of the Agreement, hospitals that have not previously reported to the NAPEDC NMDS can come into scope, subject to agreement between the jurisdiction and the Commonwealth.
