Service provider organisation—unique client count accuracy descriptor, code N

Exported from METEOR (AIHW's Metadata Online Registry)

Service provider organisation—unique client count accuracy descriptor, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Unique client count accuracy descriptor
METEOR identifier:	479136
Registration status:	Health, Standard 13/11/2014
Definition:	A descriptor of the accuracy of the number of unique clients counted provided by a service provider organisation, as represented by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Service provider organisation—unique client count accuracy descriptor
METEOR identifier:	479134
Registration status:	Health, Standard 13/11/2014
Definition:	A descriptor of the accuracy of the number of unique clients counted provided by a service provider organisation.
Object class:	Service provider organisation
Property:	Unique client count accuracy descriptor

Value domain attributes

Identifying and definitional attributes

Value domain:	Count accuracy type code N
METEOR identifier:	483018
Registration status:	Health, Standard 13/11/2014
Definition:	A code set representing actual and estimated counts.

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	**Meaning**
Permissible values:	1	Actual count
	2	Estimated count
Supplementary values:	8	Unknown count type

Data element attributes

Collection and usage attributes

Guide for use: This data element is used to differentiate the method used to count the number of 'unique clients', that is, the number of uniquely identifiable people that can be individually counted once during the reference period by a service provider organisation.

The term 'actual count' refers to the ability of a service provider organisation to report the total number of unique clients seen during the counting period.

The term 'estimated count' refers to a method of counting clients that is not based on unique client counts, or where part of the count is not based on unique clients.

Code 8, 'Unknown count type', should be used where the type of counting method is unknown.
