Property attributes

Identifying and definitional attributes

Property:	[Number of visits to a website](#)
Definition:	A count of visits to a website.
	A website visit is a series of page requests from a uniquely identified user of a website within one session. A session ends when more than 30 minutes has elapsed between each page request.
	A visit count provides a reliable measure of overall traffic to a website by indicating how many people are accessing pages within and across the website within one session.
	Note that a visit can consist of one page view, or many page views.
Property group:	[Service provision event](#)

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
