Person with prostate cancer—tissue collection method, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Prostate tissue collection method
METEOR identifier:	481993
Registration status:	Health , Standard 14/05/2015
Definition:	The method used to collect a tissue sample from a person with prostate cancer for diagnostic pathology testing, as represented by a code.
Context:	To be collected for a person with prostate cancer.
Data Element Concept:	Person with cancer—tissue collection method
Value Domain:	Prostate tissue collection method code N

Value domain attributes

Representational attributes

Representation class:	Average
Data type:	Boolean
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Transrectal ultrasound (TRUS) guided
	2	Transperineal
	3	Incidental
	8	Unknown
	9	Biopsy taken but technique not stated/inadequately specified

Collection and usage attributes

Guide for use:	<p>This code outlines the different techniques for obtaining prostate tissue for diagnostic purposes. The techniques outlined are:</p> <ul style="list-style-type: none">• Transrectal ultrasound (TRUS) guided - A biopsy where a prostate tissue sample is taken from the prostate via a needle which is guided by an ultrasound probe that has been inserted into the rectum.• Transperineal - A biopsy where a prostate tissue sample is removed with a thin needle that is inserted through the skin of the perenium.• Incidental - Where the biopsy was obtained in a procedure that was not specifically for the purpose of cancer diagnosis, for example a transurethral resection of the prostate (TURP).
