Specialised mental health service organisation—service delivery setting, code N

Exported from METEOR (AIHW's Metadata Online Registry)

Specialised mental health service organisation—service delivery setting, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Specialised mental health service delivery setting
METEOR identifier:	493347
Registration status:	Health, Standard 07/02/2013
Definition:	The service delivery setting for the components of a specialised mental health service organisation, as represented by a code.
Data Element Concept:	Specialised mental health service organisation—service delivery setting
Value Domain:	Specialised mental health service setting code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	**Meaning**
Permissible values:	1	Admitted patient care setting
	2	Residential care setting
	3	Ambulatory care setting
	4	Organisational overhead setting

Collection and usage attributes

Guide for use:

CODE 1   Admitted patient care setting

The component of specialised mental health service organisations that provides admitted patient care within **Admitted patient mental health care services**.

CODE 2   Residential care setting

The component of specialised mental health organisations that provides residential care within **Residential mental health care services**.

CODE 3   Ambulatory care setting

The component of specialised mental health service organisations that provides ambulatory care (service contacts) by Ambulatory mental health care services.

CODE 4   Organisational overhead setting
The components of specialised mental health service organisations not directly involved in the delivery of patient care services in the admitted patient, residential or ambulatory mental health care service settings, or in the operations of those settings.

Data element attributes

Collection and usage attributes

Guide for use:
The intention of the 'Organisation overhead setting' category is to separately identify staff not directly involved in the delivery of patient care services in the Admitted patient, Residential or Ambulatory mental health care service settings, or in the operations of those settings. Note that this does not imply that these roles do not have an impact on service delivery.

Staff employed to deliver patient care services should be reported in the Admitted patient (code 1), Residential (code 2) or Ambulatory (code 3) mental health care settings, as appropriate. Staff employed in the administration of a particular service would also be reported against the appropriate service setting. For example, administrative and domestic staff specifically attached to an admitted patient unit would be reported at the Admitted patient care service setting.

Organisational staff not directly involved in the delivery of patient care services should be reported in the Organisational overhead setting (code 4). For example, a chief operating officer not directly providing patient care, nor involved in the operation of services in a specific service setting, would be reported in the Organisational overhead setting.

Some staff may require apportioning across a number of service settings. For example, a clinical director, with oversight of all services provided by the organisation, would be apportioned across the service settings based on the level of involvement with each of these services.

This data element permits staffing data related to service settings to be identified and reported separately.

Regional and jurisdictional level staff are excluded from full-time equivalent staff data for the MHE NMDS.

DSS specific information:

For use in the National Outcomes and Casemix Collection (NOCC), this data element describes the service setting in which care is most typically provided by the service unit.

It does not have to correspond to the episode of service setting ([Episode of mental health care—service delivery setting, specialised mental health service setting code N](#)) data element reported on the collection occasion record. The service unit type item is an attribute of the service unit, and the episode of service setting data element is an attribute of the episode of mental health care.
