# Cancer treatment—androgen deprivation therapy purpose, code N

## Identifying and definitional attributes

|                      |  |
|----------------------|--|
| Metadata item type:  | Data Element   |
| Short name:          | Androgen deprivation therapy purpose   |
| METEOR identifier:   | 505510   |
| Registration status: | <a href="#">Health</a> , Standard 14/05/2015   |
| Definition:          | The purpose of <a href="#">androgen deprivation therapy</a> (ADT) used in the treatment of cancer, as represented by a code. |
| Context:             | Androgen deprivation therapy is used to treat people with prostate cancer.   |

|                       | 4 | Palliative |
| Supplementary values: | 8 | Unknown    |

## Collection and usage attributes

### Guide for use:

This code set outlines the purpose of androgen deprivation therapy (ADT) in the treatment of patients with prostate cancer.

#### CODE 1 Neo-adjuvant

This code should be recorded when androgen deprivation therapy (ADT) is used prior to the main treatment.

#### CODE 2 Adjuvant

This code should be recorded when androgen deprivation therapy (ADT) is used after the main treatment.

#### CODE 3 Salvage

This code should be recorded when androgen deprivation therapy (ADT) is used after a recurrence of prostate cancer for a patient who has had a radical prostatectomy.

#### CODE 4 Palliative

This code should be recorded when androgen deprivation therapy (ADT) is used to manage and alleviate symptoms and control tumour growth in palliative patients.

#### CODE 9 Unknown

This code should be recorded when androgen deprivation therapy (ADT) has been used in the treatment of a patient but the purpose of the therapy is not ascertainable from the data source.

## Source and reference attributes

Submitting organisation: Cancer Australia

## Data element attributes

## Collection and usage attributes

### Guide for use:

Record whether androgen deprivation therapy was used in the treatment of a person with cancer. Where patients have received androgen deprivation therapy for multiple purposes record this item multiple times.

Androgen hormones stimulate the growth of prostate cancer cells, and so the reduction of androgen hormones aims to reduce the spread of prostate cancer. This includes both chemical treatments, such as Luteinizing hormone-releasing hormone agonists and antagonists, and surgical treatment, such as an orchiectomy.

### Collection methods:

Collect from patient medical records.

## Source and reference attributes

Submitting organisation: Cancer Australia

## Relational attributes

Implementation in Data Set [Prostate cancer \(clinical\) NBPDS](#)  
Specifications: [Health](#), Standard 14/05/2015

***Conditional obligation:***

Collect this item when [Cancer treatment—androgen deprivation therapy, yes/no/not applicable code N](#) equals yes.
