# Type of Australian Hearing aid code N

## Identifying and definitional attributes

<b>Metadata item type:</b>	Value Domain
<b>METEOR identifier:</b>	508329
<b>Registration status:</b>	<a href="#">Indigenous</a> , Standard 05/09/2014
<b>Definition:</b>	The type of hearing aid given medical clearance to fit to a patient by Australian Hearing.

## Representational attributes

<b>Representation class:</b>	Code
<b>Data type:</b>	Number
<b>Format:</b>	N
<b>Maximum character length:</b>	1

	Value	Meaning
<b>Permissible values:</b>	1	Bone conductor aid
	2	Hearing aid(s) with mould
<b>Supplementary values:</b>	8	Unknown
	9	Not stated/inadequately described

## Collection and usage attributes

<b>Guide for use:</b>	CODE 1 Bone conductor aid  A hearing aid which works by conducting, or carrying, sound through the bone in the skull. Sounds are heard when the vibrations of the sound are transmitted directly from the vibrating part of the bone conduction hearing aid through the skull to the cochlea, missing out the outer and middle ears.  CODE 2 Hearing aid(s) with mould  An over the ear hearing aid that uses a microphone and amplifier to transmit sound. An earmould is usually a piece of plastic, acrylic or other soft material shaped to fit a patient's ear canal, and/or the outer ear structure (concha) surrounding the ear canal. The hearing aid receiver is worn behind the ear.
