Female—type of diabetes mellitus therapy during pregnancy, code N

Exported from METEOR (AIHW's Metadata Online Registry)

Female—type of diabetes mellitus therapy during pregnancy, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Diabetes therapy type during pregnancy
METEOR identifier:	516185
Registration status:	Health, Superseded 02/08/2017
Definition:	The type of diabetes mellitus treatment which a female is prescribed during pregnancy, as represented by a code.
Data Element Concept:	Female—type of diabetes mellitus therapy during pregnancy
Value Domain:	Type of diabetes mellitus therapy during pregnancy code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	**Meaning**
Permissible values:	1	Insulin
	2	Oral hypoglycaemic
	3	Diet and exercise
Supplementary values:	9	Not stated/inadequately described

Collection and usage attributes

Guide for use:	All therapies prescribed during pregnancy should be recorded. Therefore more than one code can be selected when reporting this item. CODE 2 Oral hypoglycaemic This code includes the options of sulphonylurea, biguanide (e.g. metformin), alpha-glucosidase inhibitor, thiazolidinedione, meglitinide, combination (e.g. biguanide and sulphonylurea), or other. CODE 3 Diet and exercise This code includes the options of generalised prescribed diet; avoid added sugar/simple carbohydrates (CHOs); low joule diet; portion exchange diet and uses glycaemic index and a recommendation for increased exercise. CODE 9 Not stated/inadequately described To be recorded by data entry personnel (state/territory health authority) if the data field is left blank or is inadequately completed in the perinatal data collection form or extract. Clinicians should not record Code 9.

Data element attributes

Collection and usage attributes

Collection methods: Jurisdictions that record perinatal data using the ICD-10-AM should apply the following codes:

'Code 1 Insulin' is equivalent in the ICD-10-AM to a code in the range O24.1–24.9 used in conjunction with the fifth character '2' (insulin treated).

'Code 2 Oral hypoglycaemic' is equivalent in the ICD-10-AM to a code in the range O24.1–24.9 used in conjunction with the fifth character '3' (oral hypoglycaemic therapy).

'Code 3 Diet and exercise' is equivalent in the ICD-10-AM to a code in the range O24.1–24.9 used in conjunction with the fifth character '4' (other; diet; exercise; lifestyle management).

For example, for a mother who has pre-existing Type 2 diabetes mellitus and uses oral hypoglycaemic therapy and insulin, this would be coded in the ICD-10-AM as O2412 and O2413 and would be reported against this data item using Codes 1 and 2.
