Home purchase assistance 2009-10

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	388624
<i>Registration status:</i>	Housing assistance, Candidate 23/10/2012
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	Home purchase assistance relates to the provision of financial assistance to households, to improve their access to home ownership.

Includes:

- direct lending (including government loans, shared equity loans and bridging loans)
- deposit assistance
- interest rate assistance
- mortgage relief
- other assistance grants (including Group Self and Affordable Homes Program).

Excludes:

- non-financial assistance, e.g. home purchase advisory and counselling services
- home renovation/maintenance services
- sale to tenant program
- any assistance that does not directly facilitate the purchase of a home.

Any household that had monies outstanding on repayable home purchase assistance provided in a previous period at the commencement of the 2009-10 financial year are within the scope of this collection.

Any households that received transfers of home purchase assistance in the 2009-10 financial year are within the scope of this collection.

Households that received transfers of home purchase assistance in the 2009-10 financial year, are those that commenced receiving home purchase assistance in the 2009-10 financial year and those that commenced receiving ongoing home purchase assistance in a previous financial year and continued to receive that assistance in the 2009-10 financial year.

Collection and usage attributes

Statistical unit: [Households](#)

Guide for use: As part of the 2009-10 HHIMG work program, redevelopment of the home purchase assistance data collection was agreed to, in line with the new reporting requirements under the National Affordable Housing Agreement (NAHA). Subsequently, HHIMG members agreed to a unit record level collection for home purchase assistance and to the associated data items for collection and reporting for the 2009-10 financial year.

Collection methods: **Include:**

- households that received transfers of assistance in the 2009-10 financial year
- household that had monies outstanding on repayable assistance provided in a previous period at the commencement of the 2009-10 financial year

Include:

The value of assistance provided to a household during the 2009-10 financial year for:

- all households who commenced receiving assistance for the year ending 30 June 2010 regardless of the form of assistance (i.e. whether assistance is one-off, ongoing, repayable or non-repayable); and
- all households who commenced receiving an ongoing form of assistance in a previous financial year (i.e. prior to 1 July 2009) and they continued to receive this assistance from 1 July 2009.

Exclude:

- Related administrative and operational costs associated with providing the home purchase assistance.
- The value of assistance provided to a household prior to 1 July 2009 (i.e. for households continuing to receive ongoing forms of assistance that commenced prior to 1 July 2009).
- The value of outstanding repayable monies where a repayable form of assistance was provided prior to 1 July 2009 and outstanding monies had not been repaid by 30 June 2009 (i.e. report HPA_TYPE, HPA_PAYMENT and HPA_DATE, but do not report HPA_AMOUNT).

Data qualifications:

- For those households who commenced receiving assistance in a previous financial year (i.e. prior to 1 July 2009) and they continued to receive this assistance, include only the value of assistance provided for the year ending 30 June 2010 (i.e. disregard the value of assistance provided prior to 1 July 2009).
- For those households who commenced receiving assistance in a previous financial year (i.e. prior to 1 July 2009) and they continued to receive this assistance, report the originating date of the assistance (i.e. the date the household first received the assistance).
- A separate record should be provided for each type of assistance provided to a household.
- Households receiving ongoing assistance should be counted once for the financial year only for each program type where assistance was provided – regardless of which financial year assistance commenced.
- The main applicant identifier should be the same person identifier that is used by the social housing authority across different housing programs. This field may be used to link home purchase assistance records with corresponding public rental housing, state owned and managed Indigenous housing, and/or private rent assistance records. If no such identifier exists, this field should be left blank.

Jurisdictions are requested to provide details of all programs of home purchase assistance (financial only) available to households during the 2009-10 reporting period, excluding

those specified as outside the scope of the collection, i.e. home renovation/maintenance services and sale to tenant programs. An Excel spreadsheet is provided for this purpose and includes the following fields:

- name of program
- description of program
- eligibility criteria.

Collection and usage attributes

<i>Comments:</i>	<p>Postcode - Australian may be used in the analysis of data on a geographical basis, which involves a conversion from postcodes to the Australian Bureau of Statistics (ABS) postal areas. This conversion results in some inaccuracy of information. However, in some data sets postcode is the only geographic identifier, therefore the use of other more accurate indicators (e.g. Statistical Local Area (SLA)) is not always possible.</p> <p>When dealing with aggregate data, postal areas, converted from postcodes, can be mapped to Australian Standard Geographical Classification codes using an ABS concordance, for example to determine SLAs. It should be noted that such concordances should not be used to determine the SLA of any individual's postcode. Where individual street addresses are available, these can be mapped to ASGC codes (e.g. SLAs).</p>

Value	Meaning								
1	Yes								
2	No								
9	Not stated/inadequately described								
<i>Supplementary values:</i>	9 Not stated/inadequately described								

Collection and usage attributes

<i>Guide for use:</i>	CODE 9 Not stated/ inadequately described This code is not for use in primary data collections.
-----------------------	--

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	CODE 1 YES Record if any member of the household identifies as Indigenous. CODE 2 NO Record if no members of the household identifies as Indigenous. An Indigenous household is one which contains one or more Indigenous people. This definition may not be consistent with eligibility requirements for assistance targeted to Indigenous people under a specific program. For example, some programs specify that there must be an Indigenous person aged 15 or over to be classified as an Indigenous household. A household excludes visitors to a household.
<i>Comments:</i>	Together with family , household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of

people living alone.

Australia's Aboriginal and Torres Strait Islander peoples occupy a unique place in Australian society and culture. In the current climate of reconciliation, accurate and consistent statistics about Aboriginal and Torres Strait Islander peoples are needed in order to plan, promote and deliver essential services, to monitor changes in wellbeing and to account for government expenditure in this area.

<i>Definition:</i>	The date of birth of the person.
<i>Data Element Concept:</i>	Person— date of birth

Value domain attributes

Representational attributes

<i>Representation class:</i>	Date
<i>Data type:</i>	Date/Time
<i>Format:</i>	DDMMYYYY
<i>Maximum character length:</i>	8

Data set specification specific attributes

[Home purchase assistance 2009-10](#)

<i>DSS specific information:</i>	The HPA collection requires a different format from the standard. The HPA collection required format is DD/MM/YYYY. This item refers to the date of birth of the main applicant.
----------------------------------	--

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>If date of birth is not known or cannot be obtained, provision should be made to collect or estimate age. Collected or estimated age would usually be in years for adults, and to the nearest three months (or less) for children aged less than two years. Additionally, an estimated date flag or a date accuracy indicator should be reported in conjunction with all estimated dates of birth.</p> <p>For data collections concerned with children's services, it is suggested that the estimated date of birth of children aged under 2 years should be reported to the nearest 3 month period, i.e. 0101, 0104, 0107, 0110 of the estimated year of birth. For example, a child who is thought to be aged 18 months in October of one year would have his/her estimated date of birth</p>
-----------------------	--

reported as 0104 of the previous year. Again, an estimated date flag or date accuracy indicator should be reported in conjunction with all estimated dates of birth.

Collection methods:

Information on date of birth can be collected using the one question:

What is your/(the person's) date of birth?

In self-reported data collections, it is recommended that the following response format is used:

Date of birth: __ / __ / _____

This enables easy conversion to the preferred representational layout (DDMMYYYY).

For record identification and/or the derivation of other metadata items that require accurate date of birth information, estimated dates of birth should be identified by a date accuracy indicator to prevent inappropriate use of date of birth data. The linking of client records from diverse sources, the sharing of patient data, and data analysis for research and planning all rely heavily on the accuracy and integrity of the collected data. In order to maintain data integrity and the greatest possible accuracy an indication of the accuracy of the date collected is critical. The collection of an indicator of the accuracy of the date may be essential in confirming or refuting the positive identification of a person. For this reason it is strongly recommended that the data element Date – accuracy indicator, code AAA also be recorded at the time of record creation to flag the accuracy of the data.

Comments:

Privacy issues need to be taken into account in asking persons their date of birth.

Wherever possible and wherever appropriate, date of birth should be used rather than age because the actual date of birth allows a more precise calculation of age.

When date of birth is an estimated or default value, national health and community services collections typically use 0101 or 0107 or 3006 as the estimate or default for DDMM.

It is suggested that different rules for reporting data may apply when estimating the date of birth of children aged under 2 years because of the rapid growth and development of children within this age group which means that a child's development can vary considerably over the course of a year. Thus, more specific reporting of estimated age is suggested.

Data set specification specific attributes

[Home purchase assistance 2009-10](#)

<i>DSS specific information:</i>	<p>The HPA collection requires a different format from the standard. The HPA collection required format is DD/MM/YYYY.</p> <p>For the purposes of this collection this data item should record the date that the assistance is first received by the household, regardless of whether this date precedes the 2009-10 financial year.</p> <p>The originating date of assistance will precede 1/7/2009 whenever households commenced receiving an ongoing form of assistance in a previous financial year and continued to receive that assistance in the 2009-10 financial year, or whenever households have, for the given assistance type, outstanding balances on repayable assistance provided in a previous financial year.</p> <p>For example, if a household first received direct lending assistance in the 2001-2002 financial year and has a balance outstanding on their loan at the commencement of the 2009-10 financial year, the assistance received date for direct lending assistance will be the date their loan was issued in the 2001-2002 financial year. If they then commence receive ongoing mortgage relief on this loan in the 2008-09 financial year and continue to receive mortgage relief in the 2009-10 financial year, then the assistance received date for mortgage relief will be when it was first provided in the 2008-09 financial year.</p>
----------------------------------	---

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	This metadata item should always be recorded as an 8-digit
-----------------------	--

valid date comprising day, month and year. Year should always be recorded in its full 4-digit format. For days and months with a numeric value of less than 10, zeros should be used to ensure that the date contains the required 8 digits. For example if a person received assistance from an agency on 1 July 2000 the Assistance receipt date should be recorded as 01072000 as specified in the representational layout.

Collection methods:

The date recorded should reflect the date on which the client received any type of assistance. Where a client receives more than one occasion of service on the same day, the agency should separately record each occasion of service against the same date.

Object Classes

Dwelling

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>Synonymous names:</i>	Dwelling
<i>METeOR identifier:</i>	268982
<i>Registration status:</i>	Community Services, Standard 01/03/2005 Housing assistance, Standard 01/03/2005
<i>Definition:</i>	A structure or a discrete space within a structure intended for people to live in or where a person or group of people live. Thus a structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.
<i>Context:</i>	Dwellings are the main counting unit in the housing sector. Dwellings are reported for a variety of purposes including number of untenanted or tenanted, and occupied or vacant dwellings. Dwellings may be owned and/or, managed, and/or available for a use by a specific program, including headleased stock from private and government sources. A dwelling includes a boarding house building and boarding house units .
<i>Specialisation of:</i>	Environmental factors

Collection and usage attributes

<i>Guide for use:</i>	Boarding house rooms or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling. For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.

Household

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268977
<i>Registration status:</i>	Community Services, Superseded 27/04/2007 Housing assistance, Standard 01/03/2005 Health, Standard 04/05/2005
<i>Definition:</i>	A group of two or more related or unrelated people who usually reside in the same dwelling, and who make common provision for food or other essentials for living. Or a single person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person.
<i>Context:</i>	Together with family, household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of people living alone.
<i>Specialisation of:</i>	Person/group of persons

Collection and usage attributes

<i>Guide for use:</i>	For housing data collections, the number of tenancy agreements is a practical proxy for calculating the number of households receiving housing assistance. The persons in the group may pool their incomes and have a common budget to a greater or lesser extent: they may be related or unrelated persons, or a combination of both. Only usual residents of the household are included as members of the household. Visitors to a household are, by definition, excluded from the household.

Service event

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	320989
<i>Registration status:</i>	Community Services, Standard 07/03/2006 Housing assistance, Standard 23/08/2010 Homelessness, Standard 23/08/2010
<i>Definition:</i>	An instance or occasion of assistance received by a client from a service provider.
<i>Context:</i>	<p>Information about individual instances of the receipt of assistance by a client from a service agency is of fundamental interest to service providers, but may or may not be required for national reporting purposes. However, information about an individual service event is a basic building block for other information that is of relevance to national reporting and statistical analysis. For example, if information about the length of time that certain types of persons have received particular types of assistance from specific types of agencies is required, then information about each instance of service provision should be recorded in a standard way. This should enable reliable, valid and comparable data to be reported nationally.</p> <p>Generally, a service event is described by a cluster of data elements that provide information about when it happened, where it happened, what assistance was received, how much and from whom. The need for information about service events reflects an interest in locating community service assistance to clients in time. This information may help to identify the intensity of assistance received by a person during a time period. Knowing when a person received assistance from an agency also helps to identify those records that are of interest to particular data collections. For example, an agency may be required to report on all assistance provided to clients during, say 1999-2000.</p> <p>As with the definition of <i>client</i>, what constitutes a <i>service event</i> is influenced by the definition of 'assistance'. That is, every interaction between an agency and a client may not be considered of sufficient significance to warrant recording as a <i>service event</i>. Furthermore, decisions about what is included or excluded from the definition of 'assistance' may be affected by specific program requirements as well as practical considerations related to the amount of time and resources it takes to record every interaction between an agency and a client.</p>

Postcode datafile

Identifying and definitional attributes

<i>Metadata item type:</i>	Classification Scheme
<i>METeOR identifier:</i>	270561
<i>Registration status:</i>	Community Services, Standard 01/03/2005 Housing assistance, Standard 10/02/2006 Health, Standard 01/03/2005 Independent Hospital Pricing Authority, Standard 31/10/2012
<i>Definition:</i>	The numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of a party (person or organisation), as defined by Australia Post.
<i>Context:</i>	Postcode is an important part of a persons or organisations postal address and facilitates written communication. It is one of a number of geographic identifiers that can be used to determine a geographic location. Postcode may assist with uniquely identifying a person or organisation.

Collection and usage attributes

<i>Guide for use:</i>	The postcode book is updated more than once annually as postcodes are dynamic entities and are constantly changing.

Glossary Items

Assistance received

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327202
<i>Registration status:</i>	Community Services, Standard 01/03/2005
<i>Definition:</i>	The goods or services, or time or money received by a person (client) during a service episode or event.
<i>Context:</i>	This is important for client centred collections. It may be used to measure the amounts and nature of assistance that are received directly by clients, which can be used to help assess the appropriateness and effectiveness of programs.

Collection and usage attributes

<i>Comments:</i>	<p>This is a client centred measure of amounts of assistance. This is not necessarily the same as an agency's total outlay to a particular client as it does not include administration costs, travel time for service providers, etc.</p> <p>For example, a client that receives meals from a meals on wheels service. In this instance only that which is directly received by the client is recorded (i.e. the number of meals). The administration costs of providing this service, the costs of making the meal and the time and costs of the person delivering the meal are not included in the amount of assistance received.</p> <p>This is only a measure of money, time or quantity of goods or services directly received by clients. It will not accrue to give a total of assistance provided on an agency basis (in terms of money, time or quantity of goods or services). Therefore it should not be used for National Accounts reporting.</p>

<i>Definition:</i>	<p>A classification scheme that divides an area into mutually exclusive sub-areas based on geographic location.</p> <p>Some geographic indicators are:</p> <ul style="list-style-type: none">• Australian Standard Geographical Classification (ASGC, ABS Cat No. 1216.0),• administrative regions,• electorates,• Accessibility/Remoteness Index of Australia (ARIA),• Rural, Remote and Metropolitan Area Classification (RRMA), and• country.
<i>Context:</i>	<p>To enable the analysis of data on a geographical basis.</p> <p>Facilitates analysis of service provision in relation to demographic and other characteristics of the population of a geographic area.</p>

Collection and usage attributes

<i>Comments:</i>	<p>Person (address) – Australian postcode (Postcode datafile), code [NNNN] is not included in the above listing, as it is, strictly speaking, not a geographic indicator. Sometimes postcodes are used in the analysis of data on a geographical basis, which involves a conversion to Statistical Local Area (an Australian Bureau of Statistics geographical structure). This conversion results in some inaccuracy of information. However, in some data sets Person (address) – Australian postcode (Postcode datafile), code [NNNN]; is the only geographic identifier, therefore the use of other more accurate indicators (for example, conversion from address line to Statistical Local Area) is not always possible.</p>

Head-leased dwelling (private)

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327414
<i>Registration status:</i>	Housing assistance, Standard 01/03/2005
<i>Definition:</i>	Dwellings owned by private individuals or private corporations that are leased to Commonwealth-State Housing Agreement (CSHA) housing providers via head-leasing arrangements. The CSHA housing provider is usually responsible for tenant selection and tenancy management functions.
<i>Context:</i>	Head-leasing involves at least two leases: one between the dwelling owner and the lessee, and one between the provider and the tenant. The Residential Tenancies Act applies to both leases.

Collection and usage attributes

<i>Comments:</i>	Head-leasing is commonly undertaken in the community housing sector, where non-Government organisations head-lease housing stock from the private sector and state and territory Governments, and sub lease it directly to the tenants. It is important to identify those dwellings that are head-leased from the private sector, as maintenance and other management costs are generally incurred by the owner, and therefore may not be captured in the annual CSHA data collections.
