#### Comments:

Most recent data available for 2014 Council of Australian Governments (COAG) Reform Council (CRC) report: 2011–12.

MBS and DVA item numbers change over time. Extracted data may include historical item numbers that are no longer current but have been processed by Medicare Australia within the reference period.

There is likely to be considerable overlap between the MBS/DVA data and the private hospital data, as most patients accessing private hospital services would access MBS items in association with the private hospital service.

Indigenous information is not currently available for private psychiatric hospital or DVA data.

AIHW has been undertaking scoping work to reduce the known over count in the number of people, as people could be receiving services from more than one service type. The scoping work used a statistical linkage key to conduct data linkage to determine a non-duplicated person count. Data using this methodology may be available for this cycle.

For 2011–12 data, the 2011 SEIFA IRSD quintile and decile data will be produced using the Australian Geography Classification geographical unit of Statistical Local Area. In future years, these data will be produced using the Australian Statistical Geography Standard geographical unit of Statistical Area 2.

Note that updated ERP by Indigenous status is not available for this cycle. Data by Indigenous status is calculated using ERP determined prior to the final rebased ERP provided after the 2011 Census. It is expected that final rebased ERP by Indigenous status will be available for the next cycle of reporting.
