## Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	479214
<i>Registration status:</i>	Housing assistance, Candidate 19/10/2012
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	Indigenous community housing (ICH) for the purpose of this collection includes dwellings:

- managed by Indigenous Community Housing Organisations (ICHO) who received funding both in the current and/or previous financial years; and
- targeted to Indigenous people.

A principle of the ICHO must be to provide medium- to long-term housing tenure to tenants.

This collection excludes dwellings managed under:

- mainstream community housing (i.e. not managed by an ICHO)
- public rental housing
- state owned and managed Indigenous housing (SOMIH)
- the Crisis Accommodation Program (CAP).

## Collection and usage attributes

<i>Statistical unit:</i>	<a href="#">Dwellings</a> and <a href="#">Households</a>
<i>Collection methods:</i>	Commonwealth, state and territory governments provide the data to the Australian Institute of Health and Welfare for national collation on an annual basis.
<i>Implementation start date:</i>	01/07/2010
<i>Implementation end date:</i>	30/06/2011

## Relational attributes

<i>Related metadata references:</i>	Supersedes <a href="#">Indigenous community housing 2009-10</a> Housing assistance, Candidate 19/10/2012 Has been superseded by <a href="#">Indigenous community housing 2011-12</a> Housing assistance, Standardisation pending 19/10/2012

### Indigenous community housing 2010-11

*Conditional obligation:*

Conditional on a household occupying a dwelling.

# Indigenous community housing dwelling occupancy status cluster

## Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	494607
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	In the Indigenous Community Housing collection this item is used to measure the number of dwellings that are currently occupied, available to be tenanted and those in need of maintenance or repairs.

## Collection and usage attributes

*Collection methods:* The current standards for dwelling occupancy and tenantability status have been added to this data set, to align the Indigenous community housing collection with other housing collections. The Indigenous Housing collection does not collect all concepts described in the standard data elements for occupancy and tenantability (i.e. does not collect whether a dwelling is tenatable). Alternate code values are also used by the collection, which differ from the METeOR standards.

The following table shows the codes and labels collected for the Indigenous Community Housing Collection, against the mappable METeOR standard values:

METeOR standard code	METeOR standard label	ICH Code	ICH Label
<i>Occupancy standard</i>			
1	Occupied	1	Occupied
2	Unoccupied	0	Unoccupied
<i>Tenantability standard</i>			
1	Tenantable	-	-
2	Untenantable	2	Untenantable
<i>METeOR supplementary values (applicable to both standards)</i>			
9	Not stated/Inadequately described	U	Unknown

**Code 1. Occupied** - A household has a formal tenancy agreement for a particular dwelling. Occupied dwellings include any structures that people actually live in regardless of its intended

purpose. The structure may or may not be tenatable.

**Code 2. Untenatable** - Record if the dwelling is not tenatable. An untenatable dwelling does not meet the required minimum level of basic amenity and maintenance.

**Code 0. Unoccupied** - No formal tenancy agreement exists between a household and a housing provider for a particular dwelling. A not occupied structure is only a dwelling if it is intended for human residence. The structure may or may not be tenatable. Thus a shed, garage, office, etc. is counted as an occupied dwelling if people are living there, but is not counted as vacant if there are no residents as the purpose of the structure is not for human habitation.

**Code U. Unknown** - Code if Unknown.

### Data set specification specific attributes

---

#### [Organisation file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	In the Indigenous Community Housing collection, the service provider organisation's address details were collected with a single 40 character alphanumeric field. The essential components to record an address have been provided as a cluster enabling the collection of the address line (ie. street name and number), suburb, postcode and state/territory identifier.
----------------------------------	--

---

## Address—geocode latitude, decimal degrees XN[N][.N(9)]

---

### Identifying and definitional attributes

<i>Short name:</i>	Geocode latitude decimal degrees
<i>Synonymous names:</i>	Latitude
<i>METeOR identifier:</i>	430445
<i>Registration status:</i>	Community Services, Standard 06/02/2012 Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The geographic latitude of an address point on the earth, measured in decimal degrees north or south of the equator.
<i>Data Element Concept:</i>	Address – geocode latitude

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Identifier
<i>Data type:</i>	Geospatial
<i>Format:</i>	XN[N][.N(9)]
<i>Maximum character length:</i>	12
<i>Unit of measure:</i>	Decimal degree

#### Collection and usage attributes

<i>Guide for use:</i>	<p>The 'X' in the latitude format symbolises the designator symbol “+” or “-” and should be placed prior to the first number. Latitudes north of the equator are positive and shall be designated by use of the plus sign (+), latitudes south of the equator are negative and shall be designated by use of the minus sign (-). The equator shall be designated by use of the plus sign (+).</p> <p>The format XN[N][.N(9)] allows for 1 or 2 digit latitudes (i.e. degree values) with the option of 0 to 9 decimal places (i.e. decimal degree values).</p> <p>Usage examples:</p> <ul style="list-style-type: none"><li>• +14.091360569</li><li>• +2</li><li>• -50.321</li></ul>
-----------------------	--

[Dwelling address details cluster](#)

DSS specific information:

Unknown values are recorded as "U".

## Data element attributes

---

### Collection and usage attributes

*Comments:*

Geographical coordinates (latitudes and longitudes) are the universal system for defining spatial position. A set of geographic coordinates on a datum is complete and unique, worldwide.

Positions of geographic features can be defined in space by a set of coordinates. In order for coordinates to be unique, the coordinate reference system needs to be fully defined.

A coordinate reference system is realised by a reference frame, which comprises a datum and a coordinate system.

Latitudes can also be expressed in degrees, minutes and seconds (e.g. + 66° 33' 39"), see METeOR for this related item. A conversion to decimal degrees from the degrees, minutes and seconds format can be calculated with the following formula: Decimal Degrees = Degrees + ((Minutes / 60) + (Seconds / 3600)). (REF:

<https://www2.landgate.wa.gov.au/slip/portal/home/Graticule.html>)

Usage example: -75° 59' 32.483" converts to -75.992356389 in decimal degrees (rounded up to 9 decimal places).

# Address—geocode longitude, decimal degrees XN[NN][.N(9)]

---

## Identifying and definitional attributes

<i>Short name:</i>	Geocode longitude decimal degrees
<i>Synonymous names:</i>	Longitude
<i>METeOR identifier:</i>	430469
<i>Registration status:</i>	Community Services, Standard 06/02/2012 Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The geographic longitude of an address point on the earth, measured in decimal degrees east or west of the Greenwich Meridian.
<i>Data Element Concept:</i>	Address – geocode longitude

## Value domain attributes

---

### Representational attributes

<i>Representation class:</i>	Identifier
<i>Data type:</i>	Geospatial
<i>Format:</i>	XN[NN][.N(9)]
<i>Maximum character length:</i>	13
<i>Unit of measure:</i>	Decimal degree

### Collection and usage attributes

<i>Guide for use:</i>	<p>The 'X' in the longitude format symbolises the designator symbol “+” or “-” and should be placed prior to the first number.</p> <p>The designator symbol for longitudes east of Greenwich are positive and shall be designated by use of the plus sign (+), while longitudes west of Greenwich are negative and shall be designated by use of the minus sign (-). The Prime Meridian shall be designated by use of the plus sign (+). The 180th meridian shall be designated by use of the minus sign (-).</p> <p>The format XN[NN][.N(9)] allows for 1, 2 and 3 digit longitudes (ie. degrees) with the option of 0 to 9 decimal places (ie. decimal degrees).</p>
-----------------------	--

#### Usage examples:

- +149.091360569
- +2
- -50.321-

### Source and reference attributes

## Data set specification specific attributes

---

### Dwelling address details cluster

*DSS specific information:* Unknown values are recorded as "U".

## Data element attributes

---

### Collection and usage attributes

*Comments:* Geographical coordinates (latitudes and longitudes) are the universal system for defining spatial position. A set of geographic coordinates on a datum is complete and unique, worldwide.

Positions of geographic features can be defined in space by a set of coordinates. In order for coordinates to be unique, the coordinate reference system needs to be fully defined.

A coordinate reference system is realised by a reference frame, which comprises a datum and a coordinate system.

Longitudes can also be expressed in degrees, minutes and seconds (e.g. 150° 54' 45".98), see METeOR for this related item. A conversion to decimal degrees from the degrees, minutes and seconds format can be calculated with the following formula: Decimal Degrees = Degrees + ((Minutes / 60) + (Seconds / 3600)). (REF: <https://www2.landgate.wa.gov.au/slip/portal/home/Graticule.html>)

Usage example: -75° 59' 32.483" converts to -75.992356389 in decimal degrees (rounded up to 9 decimal places).

## Dwelling—address line, text [X(180)]

---

### Identifying and definitional attributes

<i>Short name:</i>	Address line (service provider organisation)
<i>METeOR identifier:</i>	463280
<i>Registration status:</i>	Housing assistance, Candidate 19/10/2012
<i>Definition:</i>	A composite of one or more standard <b>address</b> components, as represented by text.
<i>Data Element Concept:</i>	Dwelling – address line

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Text
<i>Data type:</i>	String
<i>Format:</i>	[X(180)]
<i>Maximum character length:</i>	180

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	<p>A high-level address component is defined as a broad geographical area that is capable of containing more than one specific physical location. Some examples of a broad geographical area are:</p> <ul style="list-style-type: none"><li>• Suburb, town or locality</li><li>• Postcode</li><li>• Australian or international</li><li>• State, Territory, local government area, electorate, statistical local area</li><li>• Postal delivery point identifier</li><li>• Countries, provinces, etc. other than in Australia</li></ul> <p>These components of a complete address do not form part of the Address line.</p> <p>When addressing an Australian location, following are the standard address data elements that may be concatenated in the Address line:</p> <ul style="list-style-type: none"><li>• Building/complex sub-unit type</li><li>• Building/complex sub-unit number</li><li>• Building/property name</li><li>• Floor/level number</li><li>• Floor/level type</li><li>• House/property number</li><li>• Lot/section number</li><li>• Street name</li><li>• Street type code</li><li>• Street suffix code</li></ul> <p>One complete identification/description of a location/site of an</p>
-----------------------	---

address can comprise one or more than one instance of address line. Instances of address lines are commonly identified in electronic information systems as Address-line 1, Address-line 2, etc. The format of data collection is less important than consistent use of conventions in the recording of address data. Hence, address may be collected in an unstructured manner but should ideally be stored in a structured format. Where Address line is collected as a stand-alone item, software may be used to parse the Address line details to separate the sub-components. Multiple Address lines may be recorded as required.

*Collection methods:*

The following concatenation rules should be observed when collecting address lines addressing an Australian location.

- Building/complex sub-unit type is to be collected in conjunction with Building/complex sub-unit number and vice versa.
- Floor/level type is to be collected in conjunction with Floor/level number and vice versa.
- Street name is to be used in conjunction with Street type code and Street suffix code.
- Street type code is to be used in conjunction with Street name and Street suffix code.
- Street suffix code is to be used in conjunction with Street name and Street type code.
- House/property number is to be used in conjunction with Street name.

## Dwelling—Australian postcode code (Postcode datafile) {NNNN}

---

### Identifying and definitional attributes

<i>Short name:</i>	Dwelling postcode - Australian
<i>METeOR identifier:</i>	302040
<i>Registration status:</i>	Housing assistance, Standard 10/02/2006
<i>Definition:</i>	The numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of a dwelling.
<i>Data Element Concept:</i>	Dwelling – Australian postcode

### Value domain attributes

---

#### Representational attributes

<i>Classification scheme:</i>	<a href="#">Postcode datafile</a>
<i>Representation class:</i>	Code
<i>Data type:</i>	Number
<i>Format:</i>	{NNNN}
<i>Maximum character length:</i>	4

#### Collection and usage attributes

<i>Comments:</i>	<p>Postcode - Australian may be used in the analysis of data on a geographical basis, which involves a conversion from postcodes to the Australian Bureau of Statistics (ABS) postal areas. This conversion results in some inaccuracy of information. However, in some data sets postcode is the only geographic identifier, therefore the use of other more accurate indicators (e.g. Statistical Local Area (SLA)) is not always possible.</p> <p>When dealing with aggregate data, postal areas, converted from postcodes, can be mapped to Australian Standard Geographical Classification codes using an ABS concordance, for example to determine SLAs. It should be noted that such concordances should not be used to determine the SLA of any individual's postcode. Where individual street addresses are available, these can be mapped to ASGC codes (e.g. SLAs).</p>

# Dwelling—geographic remoteness, classification (ASGC-RA) N

---

## Identifying and definitional attributes

<i>Short name:</i>	Geographic remoteness
<i>METeOR identifier:</i>	491575
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The remoteness of a dwelling, based on the physical road distance to the nearest urban centre and its population size, as represented by a code.
<i>Data Element Concept:</i>	Dwelling – Geographic remoteness

## Value domain attributes

---

### Representational attributes

<i>Classification scheme:</i>	<a href="#">Australian Standard Geographical Classification 2010</a>	
<i>Representation class:</i>	Code	
<i>Data type:</i>	String	
<i>Format:</i>	N	
<i>Maximum character length:</i>	1	
<i>Permissible values:</i>	Value	Meaning
	1	Major cities of Australia
	2	Inner regional Australia
	3	Outer regional Australia
	4	Remote Australia
	5	Very remote Australia
	6	Migratory
<i>Supplementary values:</i>	9	Not stated/inadequately described

### Collection and usage attributes

<i>Guide for use:</i>	CODE 1 Major cities of Australia 'Major cities of Australia' includes Census Collection Districts (CDs) with an average Accessibility/Remoteness Index of Australia (ARIA+) index value of 0 to 0.2.
	CODE 2 Inner regional Australia 'Inner regional Australia' includes CDs with an average ARIA+ index value greater than 0.2 and less than or equal to 2.4.
	CODE 3 Outer regional Australia 'Outer regional Australia' includes CDs with an average ARIA+ index value greater than 2.4 and less than or equal to 5.92.
	CODE 4 Remote Australia 'Remote Australia' includes CDs with an average ARIA+ index value greater than 5.92 and less than or equal to 10.53.
	CODE 5 Very remote Australia 'Very remote Australia' includes CDs with an average ARIA+ index value greater than 10.53.
	CODE 6 Migratory

*Collection methods:* 'Migratory' is composed of off-shore, shipping and migratory CDs. In this value domain, physical distance is defined in terms of ARIA+ codes, rather than a simple linear distance between points. The list of permissible values for this value domain, i.e. codes 1 to 6, is intended to be directly mappable to the values used by the ABS to describe remoteness areas, i.e. codes 0 to 5.

*Comments:* In its initial form, as developed by GISCA and the then Department of Health and Aged Care in 1999, ARIA scores ranged from 0 to 12 and were based on proximity to 4 points of reference. A new version, ARIA+, was introduced in 2003, with ARIA+ scores now based on proximity to 5 points of reference. Also, changes were made to allow for more accurate estimation of the cost of travelling from Tasmania to the mainland, and to increase accuracy for locations at the urban fringe.

## Source and reference attributes

*Submitting organisation:* Australian Institute of Health and Welfare

*Origin:* Information relating to remoteness is available from the Geography portal on the ABS website:

	1	Yes
	2	No
<i>Supplementary values:</i>	9	Not stated/inadequately described

#### Collection and usage attributes

<i>Guide for use:</i>	CODE 9 Not stated/ inadequately described This code is not for use in primary data collections.
-----------------------	--

### Data set specification specific attributes

---

#### [Dwelling file cluster \(Indigenous community housing\)](#)

*DSS specific information:* In the Indigenous Community Housing 2011-12 collection the codeset was recorded with alternate values, and should be mapped to the values in the table below.

METeOR value	METeOR label	ICH value
1	Permanent	1
2	Improvised	0
9	Not state/Inadequately described	U

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	<b>Code 1 Yes:</b> A dwelling that has fixed walls, roof and doors. They usually have kitchen and bathroom facilities, although this is not necessary, provided these facilities could be built into the dwelling. These
-----------------------	---

dwellings are made from regular building materials and are intended for long-term residential use.

**Code 2 No:**

A structure used as a place of residence which does not meet the building requirements to be considered as a permanent dwelling. Includes caravans, tin sheds without internal walls, humpies, dongas or other makeshift shelters.

*Comments:*

This item is included in the following housing assistance data collection:

## Person—date of birth, DDMMYYYY

---

### Identifying and definitional attributes

<i>Short name:</i>	Date of birth
<i>METeOR identifier:</i>	287007
<i>Registration status:</i>	Community Services, Standard 25/08/2005 Housing assistance, Standard 20/06/2005 Health, Standard 04/05/2005 Early Childhood, Standard 21/05/2010 Homelessness, Standard 23/08/2010 Tasmanian Health, Draft 23/07/2012 WA Health, Draft 23/08/2012 Independent Hospital Pricing Authority, Standard 01/11/2012 Indigenous, Draft 18/10/2012
<i>Definition:</i>	The date of birth of the person.
<i>Data Element Concept:</i>	Person— date of birth

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Date
<i>Data type:</i>	Date/Time
<i>Format:</i>	DDMMYYYY
<i>Maximum character length:</i>	8

### Data set specification specific attributes

---

#### [Household file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	Unknown values should be recorded as "U".
----------------------------------	---

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	<p>If date of birth is not known or cannot be obtained, provision should be made to collect or estimate age. Collected or estimated age would usually be in years for adults, and to the nearest three months (or less) for children aged less than two years. Additionally, an estimated date flag or a date accuracy indicator should be reported in conjunction with all estimated dates of birth.</p> <p>For data collections concerned with children's services, it is suggested that the estimated date of birth of children aged under 2 years should be reported to the nearest 3 month period, i.e. 0101, 0104, 0107, 0110 of the estimated year of birth. For example, a child who is thought to be aged 18 months in October of one year would have his/her estimated date of birth reported as 0104 of the previous year. Again, an estimated date flag or date accuracy indicator should be reported in conjunction with all estimated dates of birth.</p>
<i>Collection methods:</i>	Information on date of birth can be collected using the one

question:

What is your/(the person's) date of birth?

In self-reported data collections, it is recommended that the following response format is used:

Date of birth: \_\_ / \_\_ / \_\_\_\_\_

This enables easy conversion to the preferred representational layout (DDMMYYYY).

For record identification and/or the derivation of other metadata items that require accurate date of birth information, estimated dates of birth should be identified by a date accuracy indicator to prevent inappropriate use of date of birth data. The linking of client records from diverse sources, the sharing of patient data, and data analysis for research and planning all rely heavily on the accuracy and integrity of the collected data. In order to maintain data integrity and the greatest possible accuracy an indication of the accuracy of the date collected is critical. The collection of an indicator of the accuracy of the date may be essential in confirming or refuting the positive identification of a person. For this reason it is strongly recommended that the data element Date – accuracy indicator, code AAA also be recorded at the time of record creation to flag the accuracy of the data.

*Comments:*

Privacy issues need to be taken into account in asking persons their date of birth.

Wherever possible and wherever appropriate, date of birth should be used rather than age because the actual date of birth allows a more precise calculation of age.

When date of birth is an estimated or default value, national health and community services collections typically use 0101 or 0107 or 3006 as the estimate or default for DDMM.

It is suggested that different rules for reporting data may apply when estimating the date of birth of children aged under 2 years because of the rapid growth and development of children within this age group which means that a child's development can vary considerably over the course of a year. Thus, more specific reporting of estimated age is suggested.

## Person—household single/couple status, code N

---

### Identifying and definitional attributes

<i>Short name:</i>	Single/couple status
<i>METeOR identifier:</i>	456321
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	Whether or not a person identifies as being involved in a couple relationship with another household member, as represented by a code.
<i>Data Element Concept:</i>	Person – household single/couple status

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Code								
<i>Data type:</i>	Number								
<i>Format:</i>	N								
<i>Maximum character length:</i>	1								
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Single status OR couple relationship with non-household member</td></tr><tr><td>2</td><td>Couple relationship with another household member (de facto or married)</td></tr><tr><td>9</td><td>Not stated/Inadequately described</td></tr></tbody></table>	Value	Meaning	1	Single status OR couple relationship with non-household member	2	Couple relationship with another household member (de facto or married)	9	Not stated/Inadequately described
Value	Meaning								
1	Single status OR couple relationship with non-household member								
2	Couple relationship with another household member (de facto or married)								
9	Not stated/Inadequately described								
<i>Supplementary values:</i>									

### Data set specification specific attributes

---

#### [Relationship in household cluster \(Indigenous community housing\)](#)

*DSS specific information:* Unknown values (code = "U") should be mapped to Not stated/Inadequately described (code= "9").

### Data element attributes

---

#### Collection and usage attributes

*Guide for use:* A relationship status is assigned to each member of the household, including children.

#### **CODE 1 Single status OR couple relationship with non-household member**

This code includes individuals that identify as being single, and those that are involved in a couple relationship but the partner is not a member of the household (ie. not nominated on the tenancy agreement).

#### **CODE 2 Couple relationship with another household member**

This code includes individuals that identify as being in a couple relationship, and live in the same dwelling (ie. both nominated as a household member on the tenancy agreement).

#### **CODE 9 Not stated/Inadequately described**

*Comments:*

This code is not for use in primary data collections.

This item is used to determine whether overcrowding exists in a dwelling, under the Canadian National Occupancy Standard (CNOS). CNOS guidelines use age, sex and relationship status of the tenants and number of bedrooms in the dwelling, to determine whether the household is overcrowded.

The standard specifies:

- no more than two people shall share a bedroom
- parents or couples may share a bedroom
- children under 5 years, either of the same sex or opposite sex may share a bedroom
- children under 18 years of the same sex may share a bedroom
- a child aged 5 to 17 years should not share a bedroom with a child under 5 of the opposite sex
- single adults 18 years and over and any unpaired children require a separate bedroom.

If the total number of bedrooms required by a household exceeds the number of bedrooms available to the household by one or more, then the household is deemed overcrowded.

<i>Supplementary values:</i>	9 Not stated/inadequately described								

#### Collection and usage attributes

<i>Guide for use:</i>	Diagnosis and procedure codes should be checked against the national ICD-10-AM sex edits, unless the person is undergoing, or has undergone a sex change or has a genetic condition resulting in a conflict between sex and ICD-10-AM code. CODE 3 Intersex or indeterminate Intersex or indeterminate, refers to a person, who because of a genetic condition, was born with reproductive organs or sex chromosomes that are not exclusively male or female or whose sex has not yet been determined for whatever reason. Intersex or indeterminate, should be confirmed if reported for people aged 90 days or greater.
<i>Comments:</i>	The definition for Intersex in Guide for use is sourced from the ACT Legislation (Gay, Lesbian and Transgender) Amendment Act 2003.

#### Source and reference attributes

<i>Origin:</i>	Australian Capital Territory 2003. Legislation (Gay, Lesbian and Transgender) Amendment Act 2003

## Data set specification specific attributes

---

### [Household file cluster \(Indigenous community housing\)](#)

DSS specific information:

Unknown values (code="U") should be mapped to Not stated/Inadequately described (code="9"). Intersex (code="3") is not used for this collection.

## Data element attributes

---

### Collection and usage attributes

Collection methods:

Operationally, sex is the distinction between male and female, as reported by a person or as determined by an interviewer. When collecting data on sex by personal interview, asking the sex of the respondent is usually unnecessary and may be inappropriate, or even offensive. It is usually a simple matter to infer the sex of the respondent through observation, or from other cues such as the relationship of the person(s) accompanying the respondent, or first name. The interviewer may ask whether persons not present at the interview are male or female.

A person's sex may change during their lifetime as a result of procedures known alternatively as sex change, gender reassignment, transsexual surgery, transgender reassignment or sexual reassignment. Throughout this process, which may be over a considerable period of time, the person's sex could be recorded as either Male or Female.

In data collections that use the ICD-10-AM classification, where sex change is the reason for admission, diagnoses should include the appropriate ICD-10-AM code(s) that clearly identify that the person is undergoing such a process. This code(s) would also be applicable after the person has completed such a process, if they have a procedure involving an organ(s) specific to their previous sex (e.g. where the patient has prostate or ovarian cancer).

CODE 3 Intersex or indeterminate

Is normally used for babies for whom sex has not been determined for whatever reason.

Should not generally be used on data collection forms completed by the respondent.

Should only be used if the person or respondent volunteers that the person is intersex or where it otherwise becomes clear during the collection process that the individual is neither male nor female.

CODE 9 Not stated/inadequately described

Is not to be used on primary collection forms. It is primarily for use in administrative collections when transferring data from data sets where the item has not been collected.

## Service provider organisation (address)—address line, text [X(180)]

---

### Identifying and definitional attributes

<i>Short name:</i>	Address line (service provider organisation)
<i>METeOR identifier:</i>	290315
<i>Registration status:</i>	Community Services, Standard 30/09/2005 Housing assistance, Candidate 19/10/2012 Health, Standard 04/05/2005 Early Childhood, Standard 21/05/2010 Tasmanian Health, Draft 12/09/2012
<i>Definition:</i>	A composite of one or more standard <b>address</b> components, as represented by text.
<i>Data Element Concept:</i>	Service provider organisation (address) – address line

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Text
<i>Data type:</i>	String
<i>Format:</i>	[X(180)]
<i>Maximum character length:</i>	180

### Data set specification specific attributes

---

#### [Service provider organisation address details cluster](#)

<i>DSS specific information:</i>	Address line is recorded as a 40 character alphanumeric field.
----------------------------------	--

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	<p>A high-level address component is defined as a broad geographical area that is capable of containing more than one specific physical location. Some examples of a broad geographical area are:</p> <ul style="list-style-type: none"><li>• Suburb, town or locality</li><li>• Postcode</li><li>• Australian or international</li><li>• State, Territory, local government area, electorate, statistical local area</li><li>• Postal delivery point identifier</li><li>• Countries, provinces, etc. other than in Australia</li></ul> <p>These components of a complete address do not form part of the Address line.</p> <p>When addressing an Australian location, following are the standard address data elements that may be concatenated in the Address line:</p> <ul style="list-style-type: none"><li>• Building/complex sub-unit type</li></ul>
-----------------------	--

- Building/complex sub-unit number
- Building/property name
- Floor/level number
- Floor/level type
- House/property number
- Lot/section number
- Street name
- Street type code
- Street suffix code

One complete identification/description of a location/site of an address can comprise one or more than one instance of address line. Instances of address lines are commonly identified in electronic information systems as Address-line 1, Address-line 2, etc. The format of data collection is less important than consistent use of conventions in the recording of address data. Hence, address may be collected in an unstructured manner but should ideally be stored in a structured format. Where Address line is collected as a stand-alone item, software may be used to parse the Address line details to separate the sub-components. Multiple Address lines may be recorded as required.

*Collection methods:*

The following concatenation rules should be observed when collecting address lines addressing an Australian location.

- Building/complex sub-unit type is to be collected in conjunction with Building/complex sub-unit number and vice versa.
- Floor/level type is to be collected in conjunction with Floor/level number and vice versa.
- Street name is to be used in conjunction with Street type code and Street suffix code.
- Street type code is to be used in conjunction with Street name and Street suffix code.
- Street suffix code is to be used in conjunction with Street name and Street type code.
- House/property number is to be used in conjunction with Street name.

## Service provider organisation (address)—Australian postcode, code (Postcode datafile) {NNNN}

---

### Identifying and definitional attributes

<i>Short name:</i>	Postcode – Australian (service provider organisation)
<i>METeOR identifier:</i>	290064
<i>Registration status:</i>	Community Services, Superseded 06/02/2012 Housing assistance, Candidate 19/10/2012 Health, Superseded 07/12/2011 Early Childhood, Superseded 09/03/2012
<i>Definition:</i>	The numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of an organisation, as represented by a code.
<i>Data Element Concept:</i>	Service provider organisation (address) – Australian postcode

### Value domain attributes

---

#### Representational attributes

<i>Classification scheme:</i>	<a href="#">Postcode datafile</a>
<i>Representation class:</i>	Code
<i>Data type:</i>	Number
<i>Format:</i>	{NNNN}
<i>Maximum character length:</i>	4

#### Collection and usage attributes

<i>Comments:</i>	<p>Postcode - Australian may be used in the analysis of data on a geographical basis, which involves a conversion from postcodes to the Australian Bureau of Statistics (ABS) postal areas. This conversion results in some inaccuracy of information. However, in some data sets postcode is the only geographic identifier, therefore the use of other more accurate indicators (e.g. Statistical Local Area (SLA)) is not always possible.</p> <p>When dealing with aggregate data, postal areas, converted from postcodes, can be mapped to Australian Standard Geographical Classification codes using an ABS concordance, for example to determine SLAs. It should be noted that such concordances should not be used to determine the SLA of any individual's postcode. Where individual street addresses are available, these can be mapped to ASGC codes (e.g. SLAs).</p>

---

#### [Service provider organisation address details cluster](#)

<i>DSS specific information:</i>	In this collection suburb is recorded as a 40 character alphanumeric field.
----------------------------------	---

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	The suburb/town/locality name may be a town, city, suburb or commonly used location name such as a large agricultural property or Aboriginal community. The Australian Bureau of Statistics has suggested that a maximum field length of 50 characters should be sufficient to record the vast majority of locality names. This metadata item may be used to describe the location of an organisation. It can be a component of a street or postal address.
<i>Collection methods:</i>	Enter 'Unknown' when the locality name or geographic area for an organisation is not known.

#### Collection and usage attributes

<i>Guide for use:</i>	An organisation may have multiple names. Naming standards for incorporated companies are defined in the Australian Securities and Investments Commission (ASIC), Schedule 6 of the Corporation Regulations.
<i>Collection methods:</i>	If special characters or symbols form part of the name they should be included. This includes all characters from the standard printable ASCII character set such as the letters A-Z, hyphens, commas, apostrophes, @, # etc, as well as the non-standard or extended ASCII characters such as ü, á, é, ®, ™ etc. Mixed case should be used rather than upper case only.

# Service provider organisation—Australian state/territory identifier, code N

---

## Identifying and definitional attributes

<i>Short name:</i>	Australian state/territory identifier (service provider organisation)
<i>METeOR identifier:</i>	289083
<i>Registration status:</i>	Community Services, Standard 07/12/2005 Housing assistance, Candidate 19/10/2012 Health, Standard 04/05/2005 Early Childhood, Standard 21/05/2010 Tasmanian Health, Draft 23/07/2012
<i>Definition:</i>	An identifier of the Australian state or territory where an organisation or agency can be located, as represented by a code.
<i>Data Element Concept:</i>	Service provider organisation – Australian state/territory identifier

---

## Value domain attributes

### Representational attributes

<i>Representation class:</i>	Code																				
<i>Data type:</i>	Number																				
<i>Format:</i>	N																				
<i>Maximum character length:</i>	1																				
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>New South Wales</td></tr><tr><td>2</td><td>Victoria</td></tr><tr><td>3</td><td>Queensland</td></tr><tr><td>4</td><td>South Australia</td></tr><tr><td>5</td><td>Western Australia</td></tr><tr><td>6</td><td>Tasmania</td></tr><tr><td>7</td><td>Northern Territory</td></tr><tr><td>8</td><td>Australian Capital Territory</td></tr><tr><td>9</td><td>Other territories (Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory)</td></tr></tbody></table>	Value	Meaning	1	New South Wales	2	Victoria	3	Queensland	4	South Australia	5	Western Australia	6	Tasmania	7	Northern Territory	8	Australian Capital Territory	9	Other territories (Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory)

8	Australian Capital Territory																				
9	Other territories (Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory)																				

### Collection and usage attributes

*Guide for use:* The order presented here is the standard for the Australian Bureau of Statistics (ABS). Other organisations (including the Australian Institute of Health and Welfare) publish data in state order based on population (that is, Western Australia before South Australia and Australian Capital Territory before Northern Territory).

### Source and reference attributes

*Reference documents:* Australian Bureau of Statistics. [Australian Standard Geographical Classification \(ASGC\). Cat No. 1216.0](#). Canberra: ABS.

## Data set specification specific attributes

---

### [Service provider organisation address details cluster](#)

*DSS specific information:* The service provider organisation state/territory identifier is recorded using the following abbreviations. Code "9" is not used by this collection.

METeOR Value	METeOR Label	CHO Recorded Value
1	New South Wales	NSW
2	Victoria	Vic
3	Queensland	Qld
4	Western Australia	WA
5	South Australia	SA
6	Tasmania	Tas
7	Australian Capital Territory	ACT
8	Northern Territory	NT
9	Other territories (Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory)	-

## Data element attributes

---

### Collection and usage attributes

*Collection methods:* Irrespective of how the information is coded, conversion of the codes to the ABS standard must be possible.

### Source and reference attributes

*Submitting organisation:* Australian Institute of Health and Welfare

*Origin:* Health Data Standard Committee  
National Community Services Data Committee

*Reference documents:* AS4846 Health Care Provider Identification, 2004, Sydney: Standards Australia  
AS5017 Health Care Client Identification, 2002, Sydney: Standards Australia  
In AS4846 and AS5017 alternative codes are presented. Refer to the current standard for more details.

### Relational attributes

---

## Service provider organisation—government funding indicator, yes/no code N

---

### Identifying and definitional attributes

<i>Short name:</i>	Funding status
<i>METeOR identifier:</i>	388518
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	An indicator of whether a service provider organisation is currently receiving government funding to assist with providing services, as represented by a code.
<i>Data Element Concept:</i>	Service provider organisation – funding indicator

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Code						
<i>Data type:</i>	Boolean						
<i>Format:</i>	N						
<i>Maximum character length:</i>	1						
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Yes</td></tr><tr><td>2</td><td>No</td></tr></tbody></table>	Value	Meaning	1	Yes	2	No
Value	Meaning						
1	Yes						
2	No						

### Data set specification specific attributes

---

#### [Organisation file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	<p>In the Indigenous Community Housing collection "Unfunded" was recorded as "0". However, in this data element "unfunded" has been recorded as "2" and should be mapped accordingly.</p> <p>For the purposes of this collection 'funded' refers to an organisation that received government funding for the reference financial year, and 'unfunded' refers to an organisation that did not receive funding for the reference financial year.</p> <p>In NSW, the ICH sector collects data from Aboriginal Community Housing Providers that are actively registered with the Aboriginal Housing Office, rather than by their funding status. For the purposes of this collection, active registration is used as a proxy for funding, but it should be noted that active registration does not guarantee funding.</p>
----------------------------------	---

### Data element attributes

---

#### Collection and usage attributes

<i>Guide for use:</i>	CODE 1 YES Record if the service provider organisation received funding.
	CODE 2 NO Record if the service provider organisation did not receive funding.

---

## Service provider organisation—gross capital expenditure, total Australian currency N[N(8)].NN

---

### Identifying and definitional attributes

<i>Short name:</i>	Total capital expenditure
<i>METeOR identifier:</i>	461534
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The total expenditure on the acquisition or enhancement of a <b>non-financial asset</b> by a service provider organisation, expressed in dollars and cents.
<i>Data Element Concept:</i>	Service provider organisation – gross capital expenditure

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)].NN
<i>Maximum character length:</i>	11
<i>Unit of measure:</i>	Australian currency (AU\$)
<i>Unit of measure precision:</i>	2

### Data set specification specific attributes

---

#### [Organisation file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	<p>In the Indigenous Community Housing collection, capital expenditure is defined according to the following parameters:</p> <p><b>Include:</b></p> <ul style="list-style-type: none"><li>• Total expenditure on non-financial assets defined as net expenditure on new and second-hand fixed assets, land and intangible assets excluding capitalised interest. Fixed assets are durable goods intended to be employed in the production process for longer than a year. Expenditure on non-financial assets includes:<ul style="list-style-type: none"><li>Total expenditure on purchases of existing dwellings.</li><li>Total expenditure on purchases of new non-financial assets:<ul style="list-style-type: none"><li>The purchase of assets intended to be used in the production process for longer than a year. Includes: fixed assets constructed on own account, valued at cost of materials, capitalised salaries and wages, reimbursements received by public authorities for amounts spent on capital works while acting as an agent for other government and private bodies.</li></ul></li><li>Total expenditure on purchases of second-hand non-financial assets:<ul style="list-style-type: none"><li>The purchase of assets which have been previously used in production in the country.</li></ul></li><li>Total expenditure on sales of non-financial assets:<ul style="list-style-type: none"><li>The disposal of previously rented dwellings, non-</li></ul></li></ul></li></ul>
----------------------------------	--

residential buildings, used plant and equipment. Refers to the sale of land (including the sale of residential leases in the ACT). The sale of land and buildings as a package is treated as sales of fixed assets unless a separate value can be determined for the land component. Also refers to the outright sales of intangible assets and disposal of motor vehicles.

Total expenditure on assets acquired under finance leases defined as assets acquired under leases and other arrangements, which effectively transfer most of the risks and benefits associated with ownership of the leased property from the lessor to the lessee.

**Exclude:**

- Expenditure on the acquisition of financial assets
- Second-hand assets imported into the country for the first time which are regarded as new.
- Assets acquired under finance lease arrangements.
- From total expenditure on purchases of new non-financial assets:
  - Capitalised interest;
  - Houses built for sale; and
  - Assets acquired under finance lease arrangements.

---

## Service provider organisation—housing maintenance expenditure, total Australian currency N[N(8)].NN

---

### Identifying and definitional attributes

<i>Short name:</i>	Maintenance expenditure
<i>METeOR identifier:</i>	464813
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The cost incurred by a service provider organisation to maintain the value of the asset or to restore the asset to its original condition, expressed in dollars and cents.
<i>Data Element Concept:</i>	Service provider organisation – housing maintenance expenditure

### Value domain attributes

---

#### Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)].NN
<i>Maximum character length:</i>	11
<i>Unit of measure:</i>	Australian currency (AU\$)
<i>Unit of measure precision:</i>	2

### Data set specification specific attributes

---

#### [Organisation file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	Unknown dollar values are recorded as "U". Includes all housing maintenance expenses from the organisation's financial reporting statement. This includes: day-to-day maintenance reflecting general wear and tear; cyclical maintenance which is part of a planned maintenance program; and other maintenance (eg. repairs due to vandalism).
----------------------------------	---

### Data element attributes

---

#### Collection and usage attributes

<i>Comments:</i>	This data element is included in the calculation of the average costs of providing rental housing assistance (excluding capital).
------------------	---

#### Relational attributes

<i>Related metadata references:</i>	Supersedes <a href="#">Housing assistance agency – recurrent expenditure (repairs and maintenance costs), total Australian currency N[N(9)]</a> Housing assistance, Standard 10/02/2006
-------------------------------------	---

---

# Service provider organisation—net recurrent housing expenses, total Australian currency N[N(8)].NN

---

## Identifying and definitional attributes

<i>Short name:</i>	Recurrent net expenditure
<i>METeOR identifier:</i>	464818
<i>Registration status:</i>	Housing assistance, Standardisation pending 19/10/2012
<i>Definition:</i>	The net recurrent expenses incurred by a service provider organisation to maintain the operation of government funded housing stock, expressed in dollars and cents.
<i>Data Element Concept:</i>	Service provider organisation – net recurrent housing expenses

## Value domain attributes

---

### Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)].NN
<i>Maximum character length:</i>	11
<i>Unit of measure:</i>	Australian currency (AU\$)
<i>Unit of measure precision:</i>	2

## Data set specification specific attributes

---

### [Organisation file cluster \(Indigenous community housing\)](#)

<i>DSS specific information:</i>	<p>Net recurrent expenses include all administration and operational costs such as:</p> <ul style="list-style-type: none"><li>• employee expenses (e.g. wages and salaries, superannuation, compensation, accrued leave, payroll tax, training)</li><li>• housing maintenance property-related expenses (e.g. rates, costs of disposals)</li><li>• office supplies and services (e.g. stationery, postage, telephone, office equipment, vehicle expenses, insurance)</li><li>• borrowing costs (e.g. interest) depreciation and amortisation</li><li>• other expenses</li></ul> <p>Net recurrent expenses exclude:</p> <ul style="list-style-type: none"><li>• depreciation on rental buildings (on tenancy rental units only, depreciation and amortisation on all other assets to be included)</li><li>• unrealised losses on financial assets</li><li>• recoverable expenses</li><li>•</li><li>• <b>Non-cash expenses</b>, including:<ul style="list-style-type: none"><li>- loss on disposal of assets</li><li>- loss on revaluation of assets</li><li>- impairment expenses</li><li>- assets and services provided free of charge</li><li>- cost of sale of inventory</li></ul></li></ul>
----------------------------------	--

- grants and subsidies

This data element collects net recurrent expenditure over the financial year. See inclusions and exclusions for details on how to count **Other non-salary expenses**.

Unknown dollar values are recorded as "U".

## **Data element attributes**

---

### **Collection and usage attributes**

*Guide for use:* Please see the DSS specific information for each collection for a list of inclusions and exclusions of expenses.

*Collection methods:* Measurement on an accrual accounting basis is preferred to measurement on a cash accounting basis.  
Expenditure is usually measured for an accounting period, typically a financial year (1 July to 30 June the following year).

### **Source and reference attributes**

# Dwelling

---

## Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>Synonymous names:</i>	Dwelling
<i>METeOR identifier:</i>	268982
<i>Registration status:</i>	Community Services, Standard 01/03/2005 Housing assistance, Standard 01/03/2005
<i>Definition:</i>	A structure or a discrete space within a structure intended for people to live in or where a person or group of people live. Thus a structure that people actually live in is a dwelling regardless of its intended purpose, but a vacant structure is only a dwelling if intended for human residence. A dwelling may include one or more rooms used as an office or workshop provided the dwelling is in residential use.
<i>Context:</i>	Dwellings are the main counting unit in the housing sector. Dwellings are reported for a variety of purposes including number of untenable or tenantable, and occupied or vacant dwellings. Dwellings may be owned and/or, managed, and/or available for a use by a specific program, including headleased stock from <b>private</b> and <b>government</b> sources. A dwelling includes a <b>boarding house building</b> and <b>boarding house units</b> .
<i>Specialisation of:</i>	Environmental factors

## Collection and usage attributes

<i>Guide for use:</i>	<b>Boarding house rooms</b> or beds are not identified as separate dwellings unless they are self-contained. Self-contained rooms are therefore defined as units and are counted as a separate dwelling. For the public rental housing and state owned and managed Indigenous housing data collections, the number of tenancy (rental) units is used as a proxy for counting the number of dwellings.
-----------------------	---

# Household

---

## Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268977
<i>Registration status:</i>	Community Services, Superseded 27/04/2007 Housing assistance, Standard 01/03/2005 Health, Standard 04/05/2005
<i>Definition:</i>	A group of two or more related or unrelated people who usually reside in the same dwelling, and who make common provision for food or other essentials for living. Or a single person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person.
<i>Context:</i>	Together with family, household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of people living alone.
<i>Specialisation of:</i>	Person/group of persons

## Collection and usage attributes

<i>Guide for use:</i>	For housing data collections, the number of tenancy agreements is a practical proxy for calculating the number of households receiving housing assistance.  The persons in the group may pool their incomes and have a common budget to a greater or lesser extent: they may be related or unrelated persons, or a combination of both.  Only usual residents of the household are included as members of the household. Visitors to a household are, by definition, excluded from the household.

## Geographic remoteness

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	396537
<i>Registration status:</i>	Community Services, Standardisation pending 22/03/2013 Housing assistance, Standardisation pending 19/10/2012 Health, Standard 07/12/2011
<i>Definition:</i>	The remoteness of a location, based on the physical road distance to the nearest urban centre and its population size.
<i>Context:</i>	Geographic remoteness is essentially a measure of a physical location's level of access to goods and services. Large population centres tend to have a greater range of goods and services available than small centres. Typically, a population centre is not likely to provide a full range of goods and services until its population reaches around 250,000 people.

## Gross capital expenditure

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269024
<i>Registration status:</i>	Housing assistance, Standard 10/02/2006 Health, Standard 01/03/2005
<i>Definition:</i>	Expenditure on the acquisition or enhancement of a <b>non-financial asset</b> .
<i>Property group:</i>	Financial characteristics

### Collection and usage attributes

<i>Guide for use:</i>	National health data dictionary specific: Gross capital expenditure is capital expenditure as reported by the particular establishment having regard to state health authority and other authoritative guidelines as to the differentiation between capital and recurrent expenditure. (A concise indication of the basis on which capital and recurrent expenditure have been differentiated is to form part of national minimum data sets). National housing assistance data dictionary specific: Expenditure on the acquisition or enhancement of an asset (excluding financial assets). A non-financial asset is an entity functioning as a store of value, over which ownership may be derived over a period of time, and which is not a financial asset. Capital includes: acquisitions (purchase of properties); construction costs; redevelopment and improvement (of properties); land acquisitions and development; joint ventures.

## Postcode datafile

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Classification Scheme
<i>METeOR identifier:</i>	270561
<i>Registration status:</i>	Community Services, Standard 01/03/2005 Housing assistance, Standard 10/02/2006 Health, Standard 01/03/2005 Independent Hospital Pricing Authority, Standard 31/10/2012
<i>Definition:</i>	The numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of a party (person or organisation), as defined by Australia Post.
<i>Context:</i>	Postcode is an important part of a persons or organisations postal address and facilitates written communication. It is one of a number of geographic identifiers that can be used to determine a geographic location. Postcode may assist with uniquely identifying a person or organisation.

### Collection and usage attributes

<i>Guide for use:</i>	The postcode book is updated more than once annually as postcodes are dynamic entities and are constantly changing.
-----------------------	---

# Glossary Items

---

## Address

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327278
<i>Registration status:</i>	Community Services, Standard 08/05/2006 Housing assistance, Recorded 13/10/2011 Health, Standard 01/03/2005
<i>Definition:</i>	The referential description of a location where an entity is located or can be otherwise reached or found.

### Collection and usage attributes

*Comments:* The following attributes are commonly used in the formation of a full address:

- Address line; (address line is a composite data element containing many attributes of the specific location of a full address - see the current version of the Address line metadata item for further description and a list of its components for addresses located in Australia)
- Address type
- Australian state/territory identifier
- Country identifier
- Non-Australian State/province
- Postal delivery point identifier
- Postcode - Australian
- Postcode - international
- Suburb/town/locality

Some attributes of an address, located within Australia, also provide the elements to determine the **Statistical Local Area (SLA)**. This enables:

- comparison of the use of services by persons residing in different geographical areas,
- characterisation of catchment areas and populations for facilities for planning purposes, and
- documentation of provision of services to clients who reside in other states or territories. The address is also a relevant element in the unambiguous identification of a Health Care Client and a Health Care Provider.

## Boarding house building

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327408
<i>Registration status:</i>	Housing assistance, Standard 01/03/2005
<i>Definition:</i>	A separate building (also referred to as a rooming or lodging house) containing multiple boarding/rooming/lodging house <b>bedrooms</b> and/or boarding house <b>units</b> .
<i>Context:</i>	The identification of boarding house buildings from individual <b>boarding house rooms</b> or <b>units</b> is important in calculating the operational costs for this type of dwelling.

### Collection and usage attributes

<i>Guide for use:</i>	<p>In Victoria, the term 'rooming house' is used and the term 'boarding house' is used to distinguish cases where meals are also provided.</p> <p>Section 5A of the Social Security Act 1991 states that:</p> <p>5A(5A) A person's accommodation is exempt accommodation (i.e. they are eligible for Commonwealth Rent Assistance (CRA) at the full single rate) if it is in premises that are, in the Secretary's opinion, a boarding house, guest house, hostel, private hotel, rooming house, lodging house or similar premises.</p> <p>5A(5B) In forming an opinion about a person's accommodation for the purpose of subsection (5A), the Secretary is to have regard to the characteristics of the accommodation including, in particular, whether or not the following are characteristics of the accommodation:</p> <ul style="list-style-type: none"><li>(a) the premises are known as a boarding house, guest house, hostel, hotel, private hotel, rooming house, lodging house or similar premises;</li><li>(b) a manager or administrator (other than a real estate agent) is retained to manage the premises or administer the accommodation on a daily or other frequent regular basis;</li><li>(c) staff are retained by the proprietor or manager of the premises to work in the premises on a daily or other frequent regular basis;</li><li>(d) the residents lack control over the day-to-day management of the premises;</li><li>(e) there are house rules, imposed by the proprietor or manager, that result in residents having rights that are more limited than those normally enjoyed by a lessee of private residential accommodation (for example, rules limiting the hours of residents' access to their accommodation or limiting residents' access to cooking facilities in the premises);</li><li>(f) the person does not have obligations to pay for his or her costs of gas, water or electricity separately from the cost of the accommodation;</li><li>(g) the accommodation is not private residential accommodation, having regard to:<ul style="list-style-type: none"><li>• the number and nature of bedrooms in the premises; or</li></ul></li></ul>
-----------------------	--

- the number of people who are not related to one another living at the premises; or
  - the number and nature of bathrooms in the premises;
- (h) the person's accommodation has not been offered to the person on a leasehold basis;
- (i) there is no requirement that the person pay a bond as security for either the payment of rent or the cost of any damage caused by the person, or for both;
- (j) the person's accommodation is available on a daily or other short-term basis.
- 5A(5C) Each of the characteristics set out in subsection 5(B) points towards the accommodation in question being exempt accommodation (i.e. the person is eligible for CRA at the full single rate)

## Geographic indicator

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327306
<i>Registration status:</i>	Community Services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005 Health, Standard 01/03/2005 Homelessness, Standard 22/10/2005
<i>Definition:</i>	<p>A classification scheme that divides an area into mutually exclusive sub-areas based on geographic location.</p> <p>Some geographic indicators are:</p> <ul style="list-style-type: none"><li>• Australian Standard Geographical Classification (ASGC, ABS Cat No. 1216.0),</li><li>• administrative regions,</li><li>• electorates,</li><li>• Accessibility/Remoteness Index of Australia (ARIA),</li><li>• Rural, Remote and Metropolitan Area Classification (RRMA), and</li><li>• country.</li></ul>
<i>Context:</i>	<p>To enable the analysis of data on a geographical basis.</p> <p>Facilitates analysis of service provision in relation to demographic and other characteristics of the population of a geographic area.</p>

### Collection and usage attributes

<i>Comments:</i>	<p>Person (address) – Australian postcode (Postcode datafile), code [NNNN] is not included in the above listing, as it is, strictly speaking, not a geographic indicator. Sometimes postcodes are used in the analysis of data on a geographical basis, which involves a conversion to Statistical Local Area (an Australian Bureau of Statistics geographical structure). This conversion results in some inaccuracy of information. However, in some data sets Person (address) – Australian postcode (Postcode datafile), code [NNNN]; is the only geographic identifier, therefore the use of other more accurate indicators (for example, conversion from address line to Statistical Local Area) is not always possible.</p>

## Head-leased dwelling (private)

---

### Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327414
<i>Registration status:</i>	Housing assistance, Standard 01/03/2005
<i>Definition:</i>	Dwellings owned by private individuals or private corporations that are leased to Commonwealth-State Housing Agreement (CSHA) housing providers via head-leasing arrangements. The CSHA housing provider is usually responsible for tenant selection and tenancy management functions.
<i>Context:</i>	Head-leasing involves at least two leases: one between the dwelling owner and the lessee, and one between the provider and the tenant. The Residential Tenancies Act applies to both leases.

### Collection and usage attributes

<i>Comments:</i>	Head-leasing is commonly undertaken in the community housing sector, where non-Government organisations head-lease housing stock from the private sector and state and territory Governments, and sub lease it directly to the tenants. It is important to identify those dwellings that are head-leased from the private sector, as maintenance and other management costs are generally incurred by the owner, and therefore may not be captured in the annual CSHA data collections.

# Urban Centre

---

## Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>Synonymous names:</i>	UC
<i>METeOR identifier:</i>	467399
<i>Registration status:</i>	Health, Standard 07/12/2011
<i>Definition:</i>	A population cluster of 1,000 or more people.
<i>Context:</i>	Urban Centres, together with Localities, make up the Urban Centre/Locality (UC/L) structure maintained by the Australian Bureau of Statistics (ABS) as part of the Australian Standard Geographical Classification (ASGC). A <b>Locality</b> is a population cluster of between 200 and 999 people. For statistical purposes, people living in Urban Centres are classified as urban while those in Localities are classified as rural.
