Address—electronic communication verification flag, code A

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Electronic communication verification flag
Synonymous names:	Electronic communication verified
METEOR identifier:	522627
Registration status:	Health , Standard 05/10/2016
Definition:	A flag used to indicate that the validity of an electronic communication address has been confirmed, as represented by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Address—electronic communication verification flag
METEOR identifier:	522614
Registration status:	Health , Standard 05/10/2016
Definition:	A flag used to indicate that the validity of an electronic communication address has been confirmed.
Object class:	Address
Property:	Electronic communication verification flag

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
Reference documents:	Standards Australia 2014. AS 4846:2014 Person and provider identification in healthcare. Sydney: Standards Australia.

Value domain attributes

Identifying and definitional attributes

Value domain:	Electronic communication verification code A
METEOR identifier:	522625
Registration status:	Health , Standard 05/10/2016
Definition:	A code set that indicates that the validity of an electronic communication address has been confirmed.

Representational attributes

Representation class:	Code				
Data type:	String				
Format:	A				
Maximum character length:	1				
Permissible values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>V</td><td>Verified with individual</td></tr></tbody></table>	Value	Meaning	V	Verified with individual
Value	Meaning				
V	Verified with individual				

	C	Confirmed by use
	X	Confirmed invalid
Supplementary values:	U	Unknown

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
Reference documents:	Standards Australia 2014. AS 4846:2014 Person and provider identification in healthcare. Sydney: Standards Australia.

Data element attributes

Collection and usage attributes

Collection methods:	Communication direction of any type should not be taken at face value and should be confirmed. Confirmation may occur by checking with the individual, by challenge, or by calling or sending a message to confirm the information.
	Confirmation by use is a higher level of confirmation than verification with the individual. If the individual has verified that the electronic communication address is correct and this address has also been confirmed, then 'Confirmed by use' is the code which should be recorded.

Source and reference attributes
