Healthcare identification occupation cluster

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	523815
Registration status:	Health , Standard 05/10/2016
DSS type:	Data Element Cluster
Scope:	The Healthcare identification occupation cluster includes data elements that define information on an individual provider's professional field of practice, profession number and date of commencement in the health profession.

Collection and usage attributes

Comments:	<p>The Australian Standard <i>Person and provider identification in healthcare</i> (AS 4846:2014) refers to 'professions' and uses the Australian Bureau of Statistics' (ABS) <i>Australian Standard Classification of Occupations</i> (ASCO) to define 'professions'.</p> <p>This data element cluster uses the ABS's <i>Australian and New Zealand Standard Classification of Occupations 2013 Version 1.2</i> (ANZSCO) instead of ASCO, as ANZSCO has replaced ASCO as the relevant classification.</p> <p>The distinction between 'occupation' and 'profession' is as follows:</p> <ul style="list-style-type: none">• 'Occupation' is a broad term describing any activity performed for monetary compensation.• 'Profession' refers to a vocation in which a high degree of education or skills are required. <p>Generally speaking, a 'profession' has a code of conduct, requires specialisation in a specific field, and/or is regulated by statute, whereas an 'occupation' does not necessarily require these attributes.</p> <p>For consistency with ANZSCO and other occupation-based metadata items, the word 'occupation' is used throughout this data element cluster to refer to 'profession', except for those instances that relate directly the profession's registration body.</p>
