Patient—colonoscope withdrawal time, total minutes NNN

Identifying and definitional attributes

| Metadata item type: | Data Element |
|-----------------------|--|
| Short name: | Colonoscope withdrawal time |
| Synonymous names: | Colonoscopy duration; Colonoscopy withdrawal time |
| METEOR identifier: | 530145 |
| Registration status: | Health, Standard 29/08/2014 |
| Definition: | The time taken to withdraw the colonoscope from the patient during a medical test or evaluation, expressed in total minutes. |
| Data Element Concept: | Patient—colonoscope withdrawal time |
| Value Domain: | Total minutes NNN |

Value domain attributes

Representational attributes

| Representation class: | Total |
|---------------------------|--------|
| Data type: | Number |
| Format: | NNN |
| Maximum character length: | 3 |

Data element attributes

Collection and usage attributes

Guide for use: The American Society for Gastrointestinal Endoscopy and the American College of Gastroenterology Taskforce on Quality in Endoscopy (2006) stated that longer colonoscopy withdrawal times have been demonstrated to improve polyp detection rates, and, conversely, rapid withdrawal of the colonoscope may miss lesions and reduce the effectiveness of colon cancer prevention.

In Australia, the standard withdrawal time should be at least six to eight minutes. This will ensure that sufficient care has been taken to thoroughly inspect the bowel for abnormalities.
