National Bowel Cancer Screening Program: PI 03- Diagnostic assessment rate

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	National Bowel Cancer Screening Program diagnostic assessment rate
Synonymous names:	NBCSP diagnostic assessment rate
METEOR identifier:	533365
Registration status:	Health , Superseded 06/09/2018
Description:	<p>The percentage of people who returned a positive National Bowel Cancer Screening Program (NBCSP) screening test in a 12-month period, and had a follow-up diagnostic assessment, measured 12 months after the defined period.</p>
Rationale:	<p>The appropriate movement of people from participation to diagnostic assessment is a key indicator of the efficiency and the impact of the program in reducing morbidity and mortality from colorectal cancer.</p> <p>While not all participants with a positive screen will necessarily undergo assessment, according to the Population Based Screening Framework (Australian Population Health Development Principal Committee, 2008), systems should be in place to ensure timely follow-up to diagnostic assessment for individuals with a positive screening test.</p> <p>Assessment services should be managed in a way that provides equity of access to the relevant assessment services regardless of geographic location, ethnicity or socioeconomic status. Annual monitoring of the diagnostic assessment rate by various stratifications may reveal emerging positive or negative trends that need to be investigated and rectified if necessary.</p> <p>To reduce the effect of any lag time between invitation, positive screen and diagnostic assessment, this indicator includes all those with a positive screen in the defined period, not all those invited in the defined period.</p>
Indicator set:	National Bowel Cancer Screening Program performance indicators 2014–2018 Health , Superseded 06/09/2018

Collection and usage attributes

Computation:	100 x (Numerator ÷ Denominator)
Numerator:	The number of people who received a positive NBCSP screen in a defined 12-month period and had a follow-up assessment within the defined period or the following 12 months.

Numerator data elements:

Disaggregation:

Items will be presented by sex and age group, by:

- State and territory
- Socioeconomic status
- Remoteness area
- Indigenous status
- Main language spoken at home
- Disability status
- Diagnostic assessment type
- Patient election status

Some disaggregation may result in numbers too small for publication.
