# National Bowel Cancer Screening Program: PI 05a-Adenoma detection rate

## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Indicator
<b>Short name:</b>	National Bowel Cancer Screening Program adenoma detection rate
<b>Synonymous names:</b>	NBCSP adenoma detection rate
<b>METEOR identifier:</b>	533371
<b>Registration status:</b>	<a href="#">Health</a> , Superseded 06/09/2018
<b>Description:</b>	<p>The percentage of people who returned a valid National Bowel Cancer Screening Program (NBCSP) screening test in a defined 12-month period who were diagnosed with an adenoma within the defined period or the following 12 months.</p>
<b>Rationale:</b>	<p>Adenomas are benign growths that have the potential to become cancerous, and their removal is likely to lower the risk of future colorectal cancer. Therefore, the adenoma detection rate (particularly the detection of advanced adenomas) is one measure of the effectiveness of the program.</p> <p>This indicator is defined to calculate the proportion of people who screened and had an adenoma detected, not the number of adenomas found per 100 diagnostic assessments. Therefore, it should not be used as a measure of the quality of diagnostic assessment.</p> <p>To reduce the effect of any lag time between invitation, positive screen, diagnostic assessment and histopathology, this indicator includes all those who screened in the defined period, not all those invited in the defined period (who had a positive screen).</p>

**Disaggregation:**

Items will be presented by sex and age group, by:

- State and territory
- Socioeconomic status
- Remoteness area
- Indigenous status
- Main language spoken at home
- Disability status
- Disease screening invitation round
- Screening test type
- Diagnostic assessment type
- Election status
- Colorectal polyp(s) type

Some disaggregation may result in numbers too small for publication.
