National Bowel Cancer Screening Program: PI 05b- Positive predictive value of diagnostic assessment for detecting adenoma

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	National Bowel Cancer Screening Program positive predictive value of diagnostic assessment for detecting adenoma
Synonymous names:	NBCSP positive predictive value of diagnostic assessment for detecting adenoma
METEOR identifier:	533374
Registration status:	Health , Superseded 06/09/2018
Description:	<p>The percentage of people who returned a positive National Bowel Cancer Screening Program (NBCSP) screening test that underwent a diagnostic assessment and were diagnosed with an adenoma, measured 12 months after the defined period.</p>
Rationale:	<p>The NBCSP aims to maximise the early detection of colorectal cancer in the target population. Adenomas are benign growths that have the potential to become cancerous, and their removal is likely to lower the risk of future colorectal cancer in these patients.</p> <p>This indicator calculates the positive predictive value of follow-up assessment for detecting adenomas. This is a measure of the quality and effectiveness of diagnostic assessment for detecting serious colorectal abnormality.</p> <p>Monitoring the positive predictive value of diagnostic assessment for detecting adenoma by various stratifications may also reveal emerging positive or negative trends that need to be investigated and rectified if necessary.</p> <p>To reduce the effect of any lag time between invitation, positive screen, diagnostic assessment and histopathology, this indicator includes all those who underwent diagnostic assessment in the defined period, not all those invited in the defined period (who had undergone diagnostic assessment).</p>
Indicator set:	National Bowel Cancer Screening Program performance indicators 2014–2018 Health , Superseded 06/09/2018

Collection and usage attributes

Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$
Numerator:	The number of people who returned a positive NBCSP screening test that underwent a diagnostic assessment and were diagnosed with an adenoma within a defined 12-month period .

Numerator data elements:

Data Element / Data Set

[Person—person identifier, X\[X\(19\)\]](#)

Data Source

[National Bowel Cancer Screening Program \(NBCSP\)](#)

NMDS / DSS

Disaggregation:

Items will be presented by sex and age group, by:

- State and territory
- Socioeconomic status
- Remoteness area
- Indigenous status
- Main language spoken at home
- Disability status
- Disease screening invitation round
- Diagnostic assessment type
- Election status
- Colorectal polyp(s) type

Some disaggregation may result in numbers too small for publication.

Disaggregation data elements:
