Tissue sample

Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 545520

Registration status: [Health](#), Recorded 27/02/2014

Definition: A small section of tissue, which is an aggregation of similarly specialised cells which together perform certain specific functions. They are generally collected for clinical, research or quality and safety monitoring purposes.

If the samples are from humans, personal history and medical information may also be stored along with a written consent to use the samples and sample information in research studies.
