National Health Performance Authority, Hospital Performance: Waiting times for emergency hospital care: Percentage completed within four hours, 2014

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Progress measure
Common name:	NEAT
Short name:	Waiting times for emergency hospital care: Percentage completed within four hours, 2014
METEOR identifier:	558277
Registration status:	National Health Performance Authority (retired) , Retired 01/07/2016
Description:	For all patients presenting to a public hospital emergency department (including publicly funded emergency departments), the percentage of presentations where the time from presentation to physical departure, i.e. the length of the emergency department stay, is within four hours.
Indicator set:	National Health Performance Authority: Hospital performance: 2011-16 National Health Performance Authority (retired) , Retired 01/07/2016
Outcome area:	Hospital and Related Care Health, Standard 07/07/2010 National Health Performance Authority (retired) , Retired 01/07/2016

Collection and usage attributes

Population group age from:	All ages
-----------------------------------	----------

Computation description: Data are provided as per the Non-admitted patient emergency department care (NAPEDC) National Minimum Data Set (NMDS) 2012-13.

The scope for calculation of the National Emergency Access Target (NEAT) is all hospitals reporting to the NAPEDC NMDS (Peer Group A, B and other) as at August 2012 (when the National Health Reform Agreement - National Partnership Agreement on Improving Public Hospital Services was signed). For the duration of the agreement, hospitals that have not previously reported to the NAPEDC NMDS can come into scope, subject to agreement between the jurisdiction and the Commonwealth.

Calculation includes all presentations with a physical departure date/time in the reporting period, including records where the presentation date/time is prior to the reporting period. Invalid records are excluded from the numerator and denominator. Invalid records are records for which:

Length of stay is less than zero

Presentation date or time missing

Physical departure date or time missing

Calculation includes presentations with any type of visit to emergency department.

Emergency department (ED) stay length is calculated by subtracting Time patient presents and Date patient presents from Emergency department physical departure time and date respectively, as per the business rules included in the NAPEDC NMDS 2012-13:

If the patient is subsequently admitted to this hospital (either short stay unit, hospital-in-the-home or non-emergency department hospital ward), record the time the patient leaves the emergency department to go to the admitted patient facility. Patients admitted to any other ward or bed within the emergency department have not physically departed the emergency department until they leave the emergency department

If the patient is admitted and subsequently dies before leaving the emergency department, then record the time the body was removed from the emergency department.

If the service episode is completed without the patient being admitted, then the time the patient's emergency department non-admitted clinical care ended.

If the service episode is completed and the patient is referred to another hospital for admission, then record the time the patient leaves the emergency department.

If the patient did not wait, then record the time the patient leaves the emergency department or was first noticed as having left.

If the patient leaves at their own risk, then record the time the patient leaves the emergency department or was first notices as having left.

If the patient died in the emergency department, then record the time the body was removed from the emergency department.

If an emergency department physician certified the death of the patient outside the emergency department, then record the time the patient was certified dead.

If the patient was dead on arrival, then record the time the body was removed from the emergency department.

Presentation time and date are the time and date of the first recorded contact with an emergency department staff member. The first recorded contact can be the commencement of the clerical registration or triage process, whichever happens first.

Computation: $100 \times (\text{Numerator} \div \text{Denominator})$

Numerator: Number of emergency department presentations where Emergency Department stay length is less than or equal to four hours..

Numerator data elements:

Comments: The scope for calculation of the National Emergency Access Target (NEAT) is all hospitals reporting to the NAPEDC NMDS (Peer Group A, B and other) as at August 2012 (when the National Health Reform Agreement - National Partnership Agreement on Improving Public Hospital Services was signed). For the duration of the agreement, hospitals that have not previously reported to the NAPEDC NMDS can come into scope, subject to agreement between the jurisdiction and the Commonwealth.

These results are reported across Australia using a hospital peer classification system refined by the Authority for the purposes of reporting the NEAT indicator in a comparable fashion. A revised version of AIHW Revision 1 method of peer classification was used for more information see page 6 in the, Technical Supplement: Time patients spent in emergency departments in 2011-12. http://www.myhospitals.gov.au/Content/Reports/time-in-emergency-department/2012-12/pdf/Technical_Supplement-Time_in_ED-2011-12.pdf
