Format:	N						
Maximum character length:	1						
Permissible values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Yes</td></tr><tr><td>2</td><td>No</td></tr></tbody></table>	Value	Meaning	1	Yes	2	No
Value	Meaning						
1	Yes						
2	No						

Data element attributes

Collection and usage attributes

Guide for use:	CODE 1 Yes <p>This code is to be used only if the model of care is midwifery caseload. This involves a midwife having a set number of women per month or per annum (full-time equivalent) for whom they are the primary midwife, providing and coordinating the majority of care throughout pregnancy, labour and after birth and acting as a backup midwife for another primary midwife. The primary midwife is usually on-call for 24 hours per day for a set period and is often paid on an annualised salary and not on shifts. This is different to team midwifery.</p> <p>CODE 2 No</p> <p>This code is to be used for all other models of care, including team midwifery. Although a team midwifery model may look after a set number of women per year, this number is shared among the team rather than having each midwife act as primary midwife for their own caseload of women.</p>
-----------------------	---

Collection methods: Data are gathered using the Maternity Care Classification System (MaCCS) data collection questionnaire on an annual basis by every maternity service when classifying their models of care or when a new model of care is introduced.
