Data element attributes

Collection and usage attributes

Guide for use:	CODE 1 Yes This code is to be used if a model of maternity care provides women with access to postnatal visits by a maternity care health professional in a residential setting such as the woman's own home, a hotel or hostel. These visits may be provided by the designated maternity carer who has provided care throughout the antenatal and/or intrapartum period or the visits may be provided as part of a "domiciliary" or "early discharge" midwifery home visiting program.
	CODE 2 No This code is to be used if a model of maternity care does not provide women with postnatal care in a residential setting and postnatal visits are only provided in a hospital, clinicians' private rooms or a community/healthcare facility following discharge from the birth setting.

Collection methods: Data are gathered using the Maternity Care Classification System (MaCCS) data collection questionnaire on an annual basis by every maternity service when classifying their models of care or when a new model of care is introduced.
