Limited to public hospitals.

Denominator limited to separations with a separation date between 1 July and 19 May in the reference year.

Denominator excludes separations where the patient died in hospital.

Analysis by state and territory is based on location of service.

Analysis by remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socioeconomic Disadvantage (IRSD) is based on usual residence of person.

Presented per 1,000 separations.

Computation: $1,000 \times (\text{Numerator} \div \text{Denominator})$

Calculated separately for each of the specified procedures

Numerator: Number of separations for public hospitals which meet all of the following criteria:

- The separation is a readmission to the same hospital following a separation in which one of the following procedures was performed: knee replacement; hip replacement; tonsillectomy and adenoidectomy; hysterectomy; prostatectomy; cataract surgery; appendicectomy (see procedure codes in *computation description* field)
- The readmission occurs within 28 days of the previous date of separation
- A principal diagnosis for the readmission has one of the following ICD-10-AM codes: T80–88, T98.3, E89, G97, H59, H95, I97, J95, K91, M96 or N99

Used for disaggregation by remoteness and SEIFA IRSD

Comments: Most recent data available for 2015 National Healthcare Agreement (NHA) performance reporting: 2012–13.

The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.

For 2011-12 data, the 2011 SEIFA IRSD quintile and decile data were produced using the Australian Standard Geography Classification geographical unit of Statistical Local Area. For 2012–13 data, the 2011 SEIFA IRSD quintile and decile data will be produced using the Australian Statistical Geography Standard geographical unit of Statistical Area 2.

The title of this indicator was changed in the 2012 NHISSC specifications from *Unplanned/unexpected readmissions within 28 days of selected surgical admissions* to *Unplanned/unexpected readmissions within 28 days of selected surgical episodes of care* to better reflect how the indicator is calculated. Readmissions for this indicator are defined within 28 days from the end of the patient's surgical episode of care.
